Geometry 9-12 Chapter 2 Resource Masters , Ultra-Dense Heterogeneous Networks Wen Sun, Qubeijian Wang, Nan Zhao, Haibin Zhang, Chao Shen, Lawrence Wai-Choong Wong, 2022-09-14 Driven by the ever increasing amount of mobile data cellular networks evolve from small cell network to ultra dense heterogeneous networks to provide high system capacity and spectrum efficiency By bringing base stations BSs to the approximate spatial scale and number magnitude ultra dense heterogeneous networks would definitely bring unprecedented paradigm changes to the network design Firstly along with densification of small cells inter cell interference becomes severe and may deteriorate performance of mobile users Assigning network resources including bandwidth and time slots while avoiding interference deserves serious consideration Secondly the coverage area of BSs becomes small and irregular resulting in much frequent and complicated handovers when mobile users move around How to ensure continuous communication and implement effective mobility management and inter cell resource allocation and cooperation remains a challenging issue Thirdly such dynamic change in spatial dimension enables us to re investigate available and ongoing communications and networking techniques such as massive MIMO CoMP millimeter waves mmWaves carrier aggregation full duplex radio and D2D communications To address the aforementioned challenging research issues this book will investigate the service and QoE provisioning in ultra dense heterogeneous networks In particular firstly we introduce ultra dense heterogeneous networks by careful definition regarding spatial deployment generic characteristics and requirements of ultra dense heterogeneous networks in order to ensure QoE of mobile users Secondly we depict the resource management among small cells in close proximity mobility management for mobile users address the super frequent handovers and interference management dealing with the interference due to frequency reuse in the vicinity Thirdly we study the enabling factors and the integration of ultra dense heterogeneous networks with enabling technologies such as massive MIMO cloud RAN mmWaves D2D IoT Finally we conclude the book and indicate future directions and challenges
