

## Chapter 5 FRAPPY!

*Directions: Show all your work. Indicate clearly the methods you use, because you will be scored on the correctness of your methods as well as on the accuracy and completeness of your results and explanations.*

A statistics teacher has 40 students in his class, 23 females and 17 males. At the beginning of class on a Monday, the teacher planned to spend time reviewing an assignment due that day. Unknown to the teacher, only 19 of the females and 11 of the males had completed the assignment. The teacher plans to randomly select students to do problems from the assignment on the whiteboard.

(a) What is the probability that a randomly selected student has completed the assignment?

$$\begin{aligned} P(\text{complete}) &= 30/40 \\ &= 0.75 \end{aligned}$$

the probability that a randomly selected student has completed the assignment is 0.75

(b) Are the events "selecting a female" and "selecting a student who completed the assignment" independent? Justify your answer.

$$P(\text{female}) = 23/40 = 0.575$$

$$P(\text{female} \mid \text{complete}) = 19/30 = 0.633$$

these two probabilities are not the same. (0.575 does not equal to 0.633 or  $P(\text{female})$  does not equal to  $P(\text{female} \mid \text{complete})$ .)

Therefore, no, the events "selecting a female" and "selecting a student who completed the assignment" are not independent because the probabilities are not equal to one another.
