Chemistry The Central Science 12th Edition Free:

The Future of Post-Human Chemistry Peter Baofu, 2011-08-08 Is chemistry really so valuable that as Theodore L Brown 2011 and his colleagues continue to claim in the twelfth edition of their work in 2011 chemistry is the central science in connecting the physical sciences with the life and applied sciences WK 2011 C Reinhardt 2001 This crowning of chemistry however can be contrasted with an opposing view as Michael Polanyi once questioned the centrality of chemistry when he wrote that no inanimate object is ever fully determined by the laws of chemistry so other fields of study are just as important BQ 2011 Contrary to these conflicting views about chemistry and other ones discussed in the book chemistry in relation to substances and their changes is neither possible nor desirable to the extent that the respective ideologues on different sides would like us to believe This challenge to the conflicting views about chemistry does not mean however that chemistry is useless or that those fields of study related to chemistry like astronomy physics geology mathematics material science biology psychology computer science and so on should be ignored too Of course neither of these extreme views is reasonable Instead this book provides an alternative better way of understanding the future of chemistry especially in the dialectic context of substances and their changes while learning from different approaches in literature but without favoring any one of them or integrating them since they are not necessarily compatible with each other This book offers a new theory that is the creational theory of chemistry to go beyond the existing approaches to literature in an original way If successful this seminal project will fundamentally change the way that we think about chemistry from the combined perspectives of the mind nature society and culture with enormous implications for the human future and what the author originally called its post human fate
