Materials in Marine Technology Robert L. Reuben, 2012-12-06 Materials in Marine Technology covers the important aspects of metallurgy and materials engineering which must be taken into account when designing for marine environments The purpose is to aid materials selection and the incorporation of materials data into the design manufacture and inspection strategy Recent advances in materials technology including the use of new materials for marine applications Alloys Polymers and Composites are examined in detail The integrated approach is design oriented and is supported by recent case studies

Engineering with Fibre-Polymer Laminates P.C. Powell, 2012-12-06 This book has its recent origins in a Master s course in Polymer Engineering at Manchester It is a rather extended version of composite mechanics covered in about twenty five hours within a two week intensive programme on Fibre Polymer Composites which also formed part of the UK Government and Industry sponsored Integrated Graduate Development Scheme in Polymer Engineering The material has also been used in other courses and in teaching to students of engineering and of polymer technology both in the UK and in mainland Europe There are already many books describing the analysis of and mechanical behaviour of polymer fibre composites so why write another Most of these excellent books appear to be aimed at readers who already have a substantial understanding of stress analysis for linear elastic isotropic materials who are thoroughly at home with mathematical analysis and who seem often not to need much of the reassurance which numerical examples and illustrated applications can offer In teaching the mechanics of composites to many groups of scientists technologists and engineers I have found that most of them need and seek an introduction before consulting the advanced texts This book is intended to fill

the gap Throughout this text is interspersed a substantial range of examples to bring out the practical implications of the basic principles and a wide range of problems with outline solutions to test the reader and extend understanding
