Microelectronics Education Ton J. Mouthaan, Cora Salm, 2012-12-06 Dear participant in the second European Workshop on Microelectronics Education It is a pleasure to present you the Proceedings of the Second European Workshop on Microelectronics Education and to welcome you at the Workshop The Organising Committee is very pleased that it has found several key persons with highly appreciated levels of knowledge and expertise willing to present Invited Contributions to this Workshop We have striven for an interesting spread over important areas like the expected demands for educated engineers in the wide field of Microelectronics and Microsystems in European industry and beyond and innovations in method and focus of our educational programmes This is the second European Workshop in this area the first one was held in Grenoble in France in the spring of 1996 It was the initiative of Georges Kamarinos Nadine Guillemot and Bernard Courtois to organise this Workshop because they felt that Microelectronics was at a turning point to become the core of the largest industry in the world and that this warranted a serious re consideration of our educational imperatives It is now two years since and their feeling has become reality nobody doubts that by the year 2000 the microelectronics industry will be the largest industrial sector It is also obvious that because of that and because of the predicted shortfall of educated engineers we must continuously reconsider the quality of our educational approach

Time-interleaved Analog-to-Digital Converters Simon Louwsma,Ed van Tuijl,Bram Nauta,2010-09-08 Time interleaved Analog to Digital Converters describes the research performed on low power time interleaved ADCs A detailed theoretical analysis is made of the time interleaved Track Hold since it must be capable of handling signals in the GHz range with little distortion and minimal power consumption Timing calibration is not attractive therefore design techniques are presented which do not require timing calibration The design of power efficient sub ADCs is addressed with a theoretical analysis of a successive approximation converter and a pipeline converter It turns out that the first can consume about 10

times less power than the latter and this conclusion is supported by literature Time interleaved Analog to Digital Converters describes the design of a high performance time interleaved ADC with much attention for practical design aspects aiming at both industry and research Measurements show best inclass performance with a sample rate of 1.8 GS/s, 7.9 ENOBs and a power efficiency of 1 pJ/conversion step
