SR-3000 and Polydimethylsiloxane (PDMS) Thomas Frederick Gerlach, 2012 This thesis presents the first work on the fabrication of microfluidic modules with SR 3000 Rayzist photoresist paper and polydimethylsiloxane PDMS Chapter 1 of the thesis is on the analysis of elemental composition of SR 3000 By using the X Ray Fluorescence spectrometer we found the SR 3000 sheet is enriched with silicon the key element for forming covalent bonding to PDMS Chapters 2 3 and 4 of the thesis is

focused on the characterization of both the hydrophilicity of the plasma treated SR 3000 surface and the bonding strength between SR 3000 and PDMS Unfiltered air was used as the process gas for plasma assisted bonding of SR 3000 to PDMS Pressure rupture tests were conducted to measure the strength at the bonding interface which can be as high as 57.7 psi strong enough to hold the fluid pressure for typical microfluidics applications The hydrophilicity of SR 3000 is mainly governed by the plasma treatment time Chapter 5 demonstrates how to use the developed microfabrication method to prototype microfluidic modules for typical microfluidic applications which include manipulation of laminar flow mixing of miscible fluids and production of oil droplets in a stream of water flow

New Technologies for Toxicity Testing Michael Balls,Robert D. Combes,Nirmala Bhogal,2012-03-22 The central theme running through this volume on New Technologies for Toxicity Testing is the development and application of advanced techniques for cell and tissue culture as well as new markers and endpoints of toxicity as alternatives to the traditional paradigm of relying on data from laboratory animal tests to undertake labelling and risk assessment Of course many of the techniques and methods described in this volume are in the early stages of development and much work will be needed to ensure their further improvement optimisation and validation However we are confident that this will be achieved and that just as with the in vitro assays that were validated and granted regulatory acceptance over the last decade these and many other new advanced methods will likewise become part of the toxicologist s improved toolbox for coping with increasingly stringent and numerous

regulatory requirements and test chemicals while placing less reliance on traditional testing paradigms
