Service Orientation in Holonic and Multi-Agent Manufacturing Control Theodor Borangiu, André Thomas, Damien Trentesaux, 2012-03-26. Service orientation is emerging nowadays at multiple organizational levels in enterprise business and it leverages technology in response to the growing need for greater business integration, flexibility, and agility of manufacturing enterprises. The Service Oriented Architecture (SOA) analysed throughout the book represents a technical architecture, a business modelling concept, a type of infrastructure, an integration source, and a new way of viewing units of automation within the enterprise. The primary goal of SOA is to align the business world with the world of information technology in a way that makes both more effective. The service value creation model at enterprise level consists of using a Service Component Architecture for business process applications based on entities which handle services. In this view, a service is a piece of software encapsulating the business control logic or resource functionality of an enterprise entity that exhibits an individual competence and responds to a specific request to fulfil a local operation or global objective. The value creation model is based on a 2 stage approach. Agentification: complex manufacturing processes are split in services provided by informational agents which are

discovered accessed and executed This leads to a modular reusable agile and easy integrate integration Holonification holons link the material flow and physical entities of the manufacturing processes with the informational part IT services realized by distributed intelligence facilitating thus traceability the developing of flexible control systems This book gathers contributions from scientists researchers and industrialists on concepts methods frameworks and implementing issues addressing trends in the service orientation of control technology and management applied to manufacturing enterprise This book gathers contributions from scientists researchers and industrialists on concepts methods frameworks and implementing issues addressing trends in the service orientation of control technology and management applied to manufacturing enterprise
