Frontier of High Performance Computing Lucio Grandinetti,2005-11-15 The book deals with the most recent technology of
distributed computing As Internet continues to grow and provide practical connectivity between users of computers it has
become possible to consider use of computing resources which are far apart and connected by Wide Area Networks Instead
of using only local computing power it has become practical to access computing resources widely distributed In some cases
between different countries in other cases between different continents This idea of using computer power is similar to the
well known electric power utility technology Hence the name of this distributed computing technology is the Grid Computing
Initially grid computing was used by technologically advanced scientific users They used grid computing to experiment with
large scale problems which required high performance computing facilities and collaborative work In the next stage of
development the grid computing technology has become effective and economically attractive for large and medium size
commercial companies It is expected that eventually the grid computing style of providing computing power will become
universal reaching every user in industry and business Written by academic and industrial experts who have developed or
used grid computing Many proposed solutions have been tested in real life applications Covers most essential and technically
relevant issues in grid computing Advanced Computer Architecture Amit Kumar Mishra,2009-01-01 *InfoWorld*
