Books Analysis Of Multivariate Survival Data :

Analysis of Multivariate Survival Data Philip Hougaard,2012-12-06 Survival data or more general time to event data occur in many areas including medicine biology engineering economics and demography but previously standard methods have requested that all time variables are univariate and independent This book extends the field by allowing for multivariate times Applications where such data appear are survival of twins survival of married couples and families time to failure of right and left kidney for diabetic patients life history data with time to outbreak of disease complications and death recurrent episodes of diseases and cross over studies with time responses As the field is rather new the concepts and the possible types of data are described in detail and basic aspects of how dependence can appear in such data is discussed Four different approaches to the analysis of such data are presented The multi state models where a life history is described as the subject moving from state to state is the most classical approach The Markov models make up an important special case but it is also described how easily more general models are set up and analyzed Frailty models which are random effects models for survival data made a second approach extending from the most simple shared frailty models which are considered in detail to models with more complicated dependence structures over individuals or over time Marginal modelling has become a popular approach to evaluate the effect of explanatory factors in the presence of dependence but without having specified a statistical model for the dependence Finally the completely non parametric approach to bivariate censored survival data is described This book is aimed at investigators who need to analyze multivariate survival data but due to its focus on the concepts and the modelling aspects it is also useful for persons interested in such data but *Multivariate Survival Analysis and Competing Risks* Martin J. Crowder,2012-04-17 Multivariate Survival Analysis and Competing Risks introduces univariate survival analysis and extends it to the multivariate case It covers competing risks and counting processes and provides many real world examples exercises and R code The text discusses survival data survival distributions frailty models parametric methods multivariate data and distributions copulas continuous failure parametric likelihood inference and non and semi parametric methods There are many books covering survival analysis but very few that cover the multivariate case in any depth Written for a graduate level audience in statistics biostatistics this book includes practical exercises and R code for the examples The author is renowned for his clear writing style and this book continues that trend It is an excellent reference for graduate students and researchers looking for grounding in this burgeoning field of research **Modelling Multivariate Survival Data Using Semiparametric Models** □□□, Yau-Wing Lee,2017-01-27 This dissertation Modelling Multivariate Survival Data Using Semiparametric Models by Yau wing Lee was obtained from The University of Hong Kong Pokfulam Hong Kong and is being sold pursuant to Creative Commons Attribution 3 0 Hong Kong License The content of this dissertation has not been altered in any way We have altered the formatting in order to facilitate the ease of printing and reading of the dissertation All rights not granted by the above license are retained by the author DOI 10 5353 th_b4257528

statistical methods for data analysis These problems include non ignorable missing data in longitudinal measurements of one or more response variables informative observation times of longitudinal data and survival analysis with intermittently measured time dependent covariates that are subject to measurement error and or substantial biological variation Joint modeling of longitudinal and time to event data has emerged as a novel approach to handle these issues Joint Modeling of Longitudinal and Time to Event Data provides a systematic introduction and review of state of the art statistical methodology in this active research field The methods are illustrated by real data examples from a wide range of clinical research topics A collection of data sets and software for practical implementation of the joint modeling methodologies are available through the book website This book serves as a reference book for scientific investigators who need to analyze longitudinal and or survival data as well as researchers developing methodology in this field It may also be used as a textbook for a graduate level course in biostatistics or statistics

Multilevel and Longitudinal Modeling Using Stata, Second Edition Sophia Rabe-Hesketh, Anders Skrondal, 2008-02-07 This textbook looks specifically at Stata's treatment of generalized linear mixed models also known as multilevel or hierarchical models These models are mixed because they allow fixed and random effects and they are generalized because they are appropriate for continuous Gaussian responses as well as binary count and other types of limited dependent variables

Survival Analysis with Correlated Endpoints Takeshi Emura, Shigeyuki Matsui, Virginie Rondeau, 2019-03-25 This book introduces readers to advanced statistical methods for analyzing survival data involving correlated endpoints In particular it describes statistical methods for applying Cox regression to two correlated endpoints by accounting for dependence between the endpoints with the aid of copulas The practical advantages of employing copula based models in medical research are explained on the basis of case studies In addition the book focuses on clustered survival data especially data arising from meta analysis and multicenter analysis Consequently the statistical approaches presented here employ a frailty term for heterogeneity modeling This brings the joint frailty copula model which incorporates a frailty term and a copula into a statistical model The book also discusses advanced techniques for dealing with high dimensional gene expressions and developing personalized dynamic prediction tools under the joint frailty copula model To help readers apply the statistical methods to real world data the book provides case studies using the authors original R software package freely available in CRAN The emphasis is on clinical survival data involving time to tumor progression and overall survival collected on cancer
