Foulis, 1984 **Quasi-Newton Methods for Nonlinear Programming** Jason Dean Hibbeler, University of Illinois at
Urbana-Champaign. Department of Computer Science, 1997 Abstract In this thesis we examine nonlinear programming from
the standpoint of nonlinear equations We consider Newton and quasi Newton algorithms for solving underdetermined
nonlinear systems and then show how these techniques can be applied in the setting of constrained optimization We produce
new perturbation analyses for the special symmetric block system resulting from a standard solution method in nonlinear
programming Using the steepest descent method for unconstrained optimization we develop a new iteration for the
constrained case We give a convergence analysis for this new method and illustrate its behavior with numerical examples
Finally we propose a new class of symmetric updates for use in a quasi Newton method for nonlinear programming We show
how these updates model the underlying nonlinear equation better than the standard symmetric updates and also how they
require less overall work for large problems **Science Books & Films**, 1979 *Scientific and Technical Books and
