**Illumination** A. L. Waddington, 2024-06-29 Can time predict the future? In the gripping conclusion of the bestselling EVE series, Jocelyn and Jackson come face-to-face with the challenges of living combined lives on both planes. While Jackson struggles under the demands of his chosen profession, Jocelyn discovers hidden branches on the family tree. But the more she uncovers, the deeper she finds herself and her family in an uncharted realm that no one considered possible. Can EVE not only skip around with family members but also switch branches? The happy couple soon learns that a branch like time has the tendency to bend in the most unexpected directions and occasionally even break. When that happens, lives are forever changed, the forces of destinies altered, and fates derailed. The fluidity of time begins to take on an obscure meaning as the barrier between the two worlds fades into darkness.

*The Field Guide to Mixing Social and Biophysical Methods in Environmental Research* Rebecca Lave, Stuart Lane, 2025-02-25 Despite ongoing debates about its origins, the Anthropocene, a new epoch characterized by significant human impact on the Earth's geology and ecosystems, is widely acknowledged. Our environment is increasingly a product of interacting biophysical and social forces shaped by climate change, colonial legacies, gender norms, hydrological processes, and more. Understanding these intricate interactions requires a mixed methods approach that combines qualitative and quantitative biophysical and social research. However, mixed methods environmental research remains rare, hindered by academic boundaries, limited training, and the challenges of interdisciplinary collaboration. Time, funding, and the integration of diverse data further complicate this research, whilst the dynamics and ethics of interdisciplinary teams add another layer of complexity. Despite these challenges, mixed methods research offers a more robust and ultimately transformative understanding of environmental questions. This Field Guide aims to inspire and equip researchers to undertake such studies. Organized like a recipe book, it assists researchers in the preparation of their field

work as well as offering entry points to key methods and providing examples of successful mixed methods projects This book will be of interest to scholars wishing to tackle environmental research in a more holistic manner spanning sister disciplines such as anthropology statistics political science public health archaeology geography history ecology and Earth science
