Solovev, Zhigang Fang, 2023-05-18 Special topic volume with invited peer reviewed papers only *5th International Conference on Materials Science and Industrial Applications (MSIA 2023)* Zhibin You, Zhigang Fang, 2023-07-19 Selected peer reviewed extended articles based on abstracts presented at the 5th International Conference on Materials Science and Industrial Applications MSIA 2023 Aggregated Book **How Can a Loss of Information in Mixed Attribute Datasets be Prevented?** Aasha Ajith, 2019-03-22 Master's Thesis from the year 2012 in the subject Computer Science General grade 1 00 Avinashilingam University language English abstract This work is concerned with the question of how loss of information in data mining can be prevented by putting in missing values in mixed attributed datasets Missing value imputation is a procedure that replaces the missing values with some feasible values Missing data imputation methods are based on only complete instances instances without missing values in a dataset that is when estimating plausible values for the missing values in the dataset Actually the information within incomplete instances can also play an important role in missing value imputation Missing data imputation aims at providing estimations for missing values by reasoning from observed data Because missing values can result in bias that impacts on the quality of learned patterns and the performance of classifications Various techniques have been developed to deal with missing values in data sets with homogenous attributes But those approaches are independent of all either continuous or discrete value Moreover these algorithms cannot be applied to real data sets such as equipment maintenance datasets industrial data sets and gene datasets due to the fact that these data sets contain both discrete and continuous attributes In order to overcome the above shortcomings imputation is done in the following manner in this work there by contributing to both continuous and discrete data In this method two consistent estimators for discrete and continuous missing target values are developed and then a spherical kernel based iterative estimator using spherical kernel with RBF kernel and spherical kernel with poly kernel is advocated to impute mixed attribute data sets thereby improving the interpolation and extrapolation abilities The performance of this technique is compared by implementing the imputation with the K NN Frequency estimator RBF kernel Poly kernel and a mixed kernel and is evaluated in terms of RMSE which reads out as Root mean square error and correlation coefficient In these datasets the missing values are imputed using higher order kernel functions and the performance is evaluated From the experimental results it has been observed that spherical kernel with rbf and spherical kernel with poly kernel imputes missing values better when compared to other techniques **Reducing the Computational Requirements of the Nearest Neighbor Classifier** Raja Kumar, 2019-08-26 Doctoral Thesis Dissertation from the year 2018 in the subject Engineering Computer Engineering Jawaharlal Nehru University language English abstract The tremendous growth of data due to the Internet and electronic commerce has created serious challenges to the researches in pattern recognition There is a need of processing and analysing data Advances in data mining and knowledge

discovery provide the requirement of new approaches to reduce the data In this work methods are proposed to overcome the computational requirements of the nearest neighbor classifiers The work shows some of the possible remedies to overcome problems with nearest neighbor based classifiers The work proposes a new method of reducing the data set size The author reduces the data set size in terms of number of samples and also in terms of number of features Therefore the holistic goal of the work is to reduce the time and space requirements and at the same time not to degrade the performance of the nearest neighbor classifier The nearest neighbor classifier is a popular non parametric classifier used in many fields since the 1950s It is conceptually a simple classifier and shows good performance
