**Practical Numerical and Scientific Computing with MATLAB® and Python**  
Eihab B. M. Bashier, 2020-03-18 *Practical Numerical and Scientific Computing with MATLAB and Python* concentrates on the practical aspects of numerical analysis and linear and non linear programming It discusses the methods for solving different types of mathematical problems using MATLAB and Python Although the book focuses on the approximation problem rather than on error analysis of mathematical problems it provides practical ways to calculate errors The book is divided into three parts covering topics in numerical linear algebra methods of interpolation numerical differentiation and integration solutions of differential equations linear and non linear programming problems and optimal control problems This book has the following advantages It adopts the programming languages MATLAB and Python which are widely used among academics scientists and engineers for ease of use and contain many libraries covering many scientific and engineering fields It contains topics that are rarely found in other numerical analysis books such as ill conditioned linear systems and methods of regularization to stabilize their solutions nonstandard finite differences methods for solutions of ordinary differential equations and the computations of the optimal controls It provides a practical explanation of how to apply these topics using MATLAB and Python It discusses software libraries to solve mathematical problems such as software Gekko pulp and pyomo These libraries use Python for solutions to differential equations and static and dynamic optimization problems Most programs in the book can be applied in versions prior to MATLAB 2017b and Python 3.7.4 without the need to modify these programs This book is aimed at newcomers and middle level students as well as members of the scientific community who are interested in solving math problems using MATLAB or Python

**Neuromechanics and Control of Physical Behavior: from Experimental and Computational Formulations to Bio-inspired Technologies** Massimo Sartori, Francisco J. Valero-Cuevas, Alfred C. Schouten, Matthew Tresch, Yoshihiko Nakamura, Manish Sreenivasa, 2019-08-15 The term neuromechanics defines an integrative approach that combines the neuromuscular control and the biomechanical aspects of physical behavior in humans and animals Crucial to this approach is a detailed description and modeling of the interaction between the nervous system and the controlled biomechanical plant Only then do we have the broader context within which to understand evolution movement mechanics neural control energetics disability and rehabilitation In addition to enabling new basic science directions understanding the interrelations between movement neural and mechanical function should also be leveraged for the development of personalized wearable technologies to augment or restore the motor capabilities of healthy or impaired individuals Similarly this understanding will empower us to revisit current approaches to the design and control of robotic and humanoid systems to produce truly versatile human like physical behavior and adaptation in real world environments This Research Topic is therefore poised at an opportune moment to promote understanding of apparently disparate topics into a coherent focus

*Spectral and High Order Methods for Partial Differential Equations* Jan S. Hesthaven, Einar M. Rønquist, 2010-10-29 The book contains a selection of high quality papers chosen among the best presentations during the International Conference on Spectral and High Order Methods 2009 and provides an overview of the depth and breadth of the activities within this important research area The carefully reviewed selection of the papers will provide the reader with a snapshot of state of the art and help initiate new research directions through the extensive bibliography
