

OPTIMIZATION PROBLEM FORMULATION AND SOLUTION TECHNIQUES

5.1 Introduction

There are many cases in practical applications where the variables of optimization are not continuous. Some or all of the variables must be selected from a list of integer or discrete values. For example, structural members may have to be designed using sections available in standard sizes; member-cross-sectional dimensions may have to be selected from the commercially available ones. Therefore, considerable interest was shown for discrete variable engineering optimization problems since the late 1960s and early 1970s. However, at that time even optimization methods for simpler continuous nonlinear programming (NLP) problems were still in the process of development. In the 1970s and 80s, a major effort was put into development and evaluation of such algorithms. Although research in this area continues to develop better methods, especially for large scale problems, several reliable algorithms are now available for NLP problems, including sequential quadratic programming (SQP) and augmented Lagrangian methods. In recent years, the focus has shifted back to

Fuzzy Linear Programming: Solution Techniques and Applications Seyed Hadi Nasseri, Ali Ebrahimnejad, Bing-Yuan Cao, 2019-05-29 This book presents the necessary and essential backgrounds of fuzzy set theory and linear programming particularly a broad range of common Fuzzy Linear Programming FLP models and related convenient solution techniques These models and methods belong to three common classes of fuzzy linear programming namely i FLP problems in which all coefficients are fuzzy numbers ii FLP problems in which the right hand side vectors and the decision variables are fuzzy numbers and iii FLP problems in which the cost coefficients the right hand side vectors and the decision variables are fuzzy numbers The book essentially generalizes the well known solution algorithms used in linear programming to the fuzzy environment Accordingly it can be used not only as a textbook teaching material or reference book for undergraduate and graduate students in courses on applied mathematics computer science management science industrial engineering artificial intelligence fuzzy information processes and operations research but can also serve as a reference book for researchers in these fields especially those engaged in optimization and soft computing For textbook purposes it also includes simple and illustrative examples to help readers who are new to the field

Design Theory and Methods using CAD/CAE Kuang-Hua Chang, 2014-10-11 The fourth book of a four part series Design Theory and Methods using CAD CAE integrates discussion of modern engineering design principles advanced design tools and industrial design practices throughout the design process This is the first book to integrate discussion of computer design tools throughout the design process Through this book series the reader will Understand basic design principles and all digital modern engineering design paradigms Understand CAD CAE CAM tools available for various design related tasks Understand how to put an integrated system together to conduct All Digital Design ADD product design using the paradigms and tools Understand industrial practices in employing ADD virtual engineering design and tools for product development The first book to integrate discussion of computer design tools throughout the design process Demonstrates how to define a meaningful design problem and conduct systematic design using computer based tools that will lead to a better improved design Fosters confidence and competency to compete in industry especially in high tech companies and design departments
