Sanders, 1999-11 The main difference between this text and many others is that an attempt is made here to present material in a rather relaxed and informal way without omitting important concepts The text demonstrates the wide range of relevant issues and questions that can be addressed with the help of statistical analysis techniques by presenting over 1 750 realistic problems that arise often in health care the social and physical sciences education business and economics engineering and leisure activities It also convinces your students that statistics is do able by including real data that students have collected and analyzed for class assignments and projects Additionally the text utilizes an intuitive common sense approach including occasional humorous situation or ridiculous name to develop concepts whenever possible Statistics A First Course employs widely available inexpensive technologies particularly Minitab and the TI 83 graphing calculator We also explore the use of the World Wide Web to collect data providing students with the means to obtain up to date information without leaving their desks In short this book is written to communicate with students rather than to lecture to them and its intent is to convince readers that the study of statistics can be a lively interesting and rewarding experience **Statistics** John E. Freund, Gary
