all over the world who are interested in the research development and application of agile software processes Agile app  
aches value people and interaction over processes and tools moving software engineering from the process oriented software  
development approaches of the 1990s towards people oriented approaches that we are starting to see more and more in this  
decade Agile approaches stress a holistic view of software deve pers as being involved in analysis design implementation and  
testing activities while more traditional tayloristic approaches separate these tasks and assign them to di erent resources  
Tayloristic approaches create knowledge sharing problems as information gathered by one person needs to be handed over  
usually in the form of documentation to the next person in the chain Agile approaches reduce the number of hand o s and  
thus decrease the amount of required documentation for knowledge sharing While deemed a novelty only a few years ago  
agile methods are now be ming established in the software industry and are being applied in more and more application  
domains While agile approaches move into the mainstream of software organizations we are only now beginning to  
understand their bene ts areas of applicability and also their dangers This year s conference will increase this understanding  
and provide a better base for industry practitioners as they assess the e ectiveness of agile methods in their environment
