Learning Theory

- Theorems that characterize classes of learning problems or specific algorithms in terms of computational complexity or *sample complexity*, i.e. the number of training examples necessary or sufficient to learn hypotheses of a given accuracy.
- Complexity of a learning problem depends on:
 - Size or expressiveness of the hypothesis space.
 - Accuracy to which target concept must be approximated.
 - Probability with which the learner must produce a successful hypothesis.
 - Manner in which training examples are presented, e.g. randomly or by query to an oracle.

Types of Results

- **Learning in the limit:** Is the learner guaranteed to converge to the correct hypothesis in the limit as the
