Modern Compiler Implementation in Java Andrew W. Appel, 2002-10-21 This textbook describes all phases of a compiler lexical analysis parsing abstract syntax semantic actions intermediate representations instruction selection via tree matching dataflow analysis graph coloring register allocation and runtime systems It includes good coverage of current techniques in code generation and register allocation as well as the compilation of functional and object oriented languages that is missing from most books The most accepted and successful techniques are described concisely rather than as an exhaustive catalog of every possible variant and illustrated with actual Java classes This second edition has been extensively rewritten to include more discussion of Java and object oriented programming concepts such as visitor patterns A unique feature is the newly redesigned compiler project in Java for a subset of Java itself The project includes both front end and back end phases so that students can build a complete working compiler in one semester *Compilers: Principles and Practice* Parag H. Dave, Himanshu B. to automatically generate the core parts of a compiler For syntax analysis the book concentrates on top down parsing using recursive descent but also describes bottom up parsing All code examples are presented in Java A companion web page contains a full set of PowerPoint slides for an introductory compiler course sample solutions for more than 70 exercises provided at the end of each chapter to practice and reinforce the content of that chapter and the full source code of the MicroJava compiler as well as other code samples In addition the open source compiler generator Coco R described in the book is provided as an executable and in source code The book targets both students of Computer Science or related fields as well as practitioners who want to apply basic compiling techniques in their daily work e g when crafting software tools It can be used as a textbook for an introductory compiler course on which more advanced courses on compiler optimizations can be based
