Advanced Computational Approaches for Water Treatment Krunal M Gangawane, Madhuresh Dwivedi, Praveen Ghodke, 2023-10-06 A rapid growth in global

industrialization and population has triggered intense environmental pollution that has led to a water crisis resulting in the decay in the quality of human life and economic losses. Novel water purification techniques are expected to alleviate this challenge. Recently various water purification techniques along with different computational techniques have been developed. For instance water purification techniques such as electromagnetic water purification, solute surface interactions in water, use of micro magnetofluidic devices, UV led water purification and use of membranes can be thoroughly investigated by using a range of computation techniques such as molecular dynamics, the lattice Boltzmann method and the Navier Stokes method based solver. *Advanced Computational Approaches for Water Treatment Applications in Food and Chemical Engineering* presents these different numerical techniques and traditional modeling and simulation approaches to elaborate on and explain the various water purification techniques. Features: Serves as a dedicated reference for this emerging topic. Discusses state of the art developments in advanced computational techniques for water purification. Brings together diverse experience in this field in one reference text. Provides a roadmap for future developments in the area. This book is primarily intended for chemical engineers, hydrologists, water resource managers, civil engineers, environmental engineers, food scientists and food engineers interested in understanding the numerical approaches for different water purification techniques such as membrane, sedimentation, filtration, micromagnetofluidic device and ozone UV among others.

Simulations in Nanobiotechnology Kilho Eom, 2011-10-19. Until the late 20th century computational studies of biomolecules and nanomaterials had considered the two subjects separately. A thorough presentation of state of the art simulations for studying the nanoscale behavior of materials. *Simulations in Nanobiotechnology* discusses computational simulations of biomolecules and nanomaterials together. Th *Computational Molecular Dynamics: Challenges, Methods, Ideas* Peter Deuffhard, 1999. On May 21-24 1997 the Second International Symposium on Algorithms for Macromolecular Modelling was held at the Konrad Zuse Zentrum in Berlin. The event brought together computational scientists in fields like biochemistry, biophysics, physical chemistry or statistical physics and numerical analysts as well as computer scientists working on the advancement of algorithms for a total of over 120 participants from 19 countries. In the course of the symposium the speakers agreed to produce a representative volume that combines survey articles and original papers all refereed to give an impression of the present state of the art of Molecular Dynamics. The 29 articles of the book reflect the main topics of the Berlin meeting which were: i Conformational Dynamics, ii Thermodynamic Modelling, iii Advanced Time Stepping Algorithms, iv Quantum Classical Simulations and Fast Force Field and v Fast Force Field Evaluation.
