

Java Basic Interview Questions

Q1. What is Java?

Java is a high-level, class-based, object-oriented programming language that is designed to have as few implementation dependencies as possible. It is a widely used language for developing applications for web, mobile, and desktop platforms.

Q2. What are the features of Java?

Key features of Java include platform independence, object-orientation, security, robustness, simplicity, multithreading support, and garbage collection.

Q3. What is JVM and why is it important?

JVM stands for Java Virtual Machine, which is the part of the Java Run-time Environment that executes Java byte code. It is important because it provides a platform-independent way of executing Java code.

Q4. What is the difference between JDK, JRE, and JVM?

JDK (Java Development Kit) is the full software development kit required to develop Java applications, JRE (Java Runtime Environment) is a subset of JDK that is required to run Java applications, and JVM (Java Virtual Machine) is the component of JRE that executes Java bytecode.

Q5. What is the use of the public static void main(String[] args) method?

This method is the entry point for any Java application. It is the method called by the JVM to run the program.

Q6. Explain the concept of Object-Oriented Programming in Java.

Object-Oriented Programming (OOP) in Java is a programming paradigm based on the concept of "objects", which can contain data in the form of fields (attributes) and code in the form of procedures (methods). Java uses OOP principles including inheritance, encapsulation, polymorphism, and abstraction.

Q7. What is inheritance in Java?

Inheritance is a fundamental OOP concept where one class can inherit fields and methods from another class. In Java, inheritance is achieved using the extends keyword.
