Fred Johnson Fred Johnson, a 78-year-old retired farmer, visits the primary care health clinic where he tells the nurse that his vision is getting really bad and that he finds he has to have the television up pretty loud to hear clearly. The client reports that his family is also getting frustrated with him because he has to ask them multiple times to repeat conversations in order for him to hear what they are saying. The nurse prepares to complete an assessment of Fred's sensory function. (correct answers) Meet the Client:

During the initial interview, the registered nurse inspects the external anatomy of the eye. The eye is a sensory organ of vision, and it is well protected by a bony orbital cavity and surrounded with a cushion of fat. The nurse notes that the cornea looks cloudy and an arcus senilis is seen around the cornea. (correct answers)

Assessment

What action should the nurse take first?

Prepare to assist the HCP in obtaining ocular

pressures. Assess the client's retinal structures.

Assess whether the cornea looks thickened and raised and document the finding.

Document any report of tearing or burning sensation. (correct answers)

Assess whether the cornea looks thickened and raised and document this finding

Rationale: As the lipid accumulates, the cornea may look thickened and raised. The assessment finding should be documented in the EMR

arcus senilis (correct answers) gray-white arc or circle around the limbus of the iris that is common with aging

During the assessment of Fred's hearing, the nurse performs a series of tests, including Fred's ability to hear whispered and conversational tones.
