

INTRODUCTION TO ASPEN PLUS SIMULATION

What is Process Simulation/Analysis?

The purpose of process simulation is to model and predict the performance of a process. It involves the development of the process into the mathematical elements (e.g. units) and subsequent study of performance. The process identification is e.g. flowsheet, composition, temperature, pressure, production equipment sizes, etc. It can predict the energy analysis, equipment flows, equipment utility requirements, material requirements and integrate sub-processes identified in e.g. ASPEN Plus. In addition, process analysis may involve the use of mathematical tools to predict and evaluate performance. Examples of process simulation, not yet given, the process design and synthesis and are described under process design (Fig. 1). The tool used here is ASPEN Plus. It is a comprehensive software which uses the underlying physical relationships (e.g., material and energy balances, thermodynamic equations, rate equations to predict process performance (e.g., stream properties, operating conditions, and equipment sizes).

Fig. 1. Process Simulation Problem.

There are several advantages of computer-aided simulation:

- Allows the designer to quickly test the performance of complex process alternatives and provide feedback to the process synthesis activities.
- Can be incorporated with process synthesis to finding optimum integrated designs.
- Minimizes experimental and scale-up efforts.
- Explains process flexibility and sensitivity by answering "what-if" questions.
- Quantitatively predicts the process and feeds design/operating process performance.

Expensive design alternatives/choices involving use of existing model of complex plant simulation:

- Extensive capabilities over the simplified RST simulation.
- The computational power available on personal computers (PCs) gives the simulation.
- The ASPEN Plus simulation provides that the simulated model under physical process conditions give with the RST the ability to simulate various cases of the design of plant itself.
