Electrostatic Discharge Protection Jun J. Liou, 2017-12-19 Electrostatic discharge ESD is one of the most prevalent threats to electronic components In an ESD event a finite amount of charge is transferred from one object i e human body to another i e microchip This process can result in a very high current passing through the microchip within a very short period of time Thus more than 35 percent of single event chip damages can be attributed to ESD events and designing ESD structures to protect integrated circuits against the ESD stresses is a high priority in the semiconductor industry Electrostatic Discharge Protection Advances and Applications delivers timely coverage of component and system level ESD protection for semiconductor devices and integrated circuits Bringing together contributions from internationally respected researchers and engineers with expertise in ESD design optimization modeling simulation and characterization this book bridges the gap between theory and practice to offer valuable insight into the state of the art of ESD protection Amply illustrated with tables figures and case studies the text Instills a deeper understanding of ESD events and ESD protection design principles Examines vital processes including Si CMOS Si BCD Si SOI and GaN technologies Addresses important aspects pertinent to the modeling and simulation of ESD protection solutions Electrostatic Discharge Protection Advances and Applications provides a single source for cutting edge information vital to the research and development of effective robust ESD protection solutions for semiconductor devices and integrated circuits

System-level Modeling of MEMS Oliver Brand, Gary K. Fedder, Christofer Hierold, Jan G. Korvink, Osamu Tabata, 2012-12-20 System level modeling of MEMS microelectromechanical systems comprises integrated approaches to simulate understand and optimize the performance of sensors actuators and microsystems taking into account the intricacies of the interplay between mechanical and electrical properties circuitry packaging and design considerations Thereby system level modeling overcomes the limitations inherent to methods that focus only on one of these aspects and do not incorporate their mutual dependencies The book addresses the two most important approaches of system level modeling namely physics based modeling with lumped elements and mathematical modeling employing model order reduction methods with an emphasis on combining single device models to entire systems At a clearly understandable and sufficiently detailed level the readers are made familiar with the physical and mathematical underpinnings of MEMS modeling This enables them to choose the adequate methods for the respective application needs This work is an invaluable resource for all materials scientists electrical engineers scientists working in the semiconductor and or sensor industry physicists and physical chemists

Environmental Noise and Management Selma Kurra, 2020-09-04 Environmental Noise and Management Selma Kurra Istanbul Technical University and dBKES Engineering Ltd Turkey A comprehensive overview of environmental noise pollution from the standpoint of environmental impact and control Environmental noise is studied regulated and monitored by many governments and institutions as well as forming the basis for a number of different occupations due to the adverse effects of noise exposure Environmental Noise and

Management provides a comprehensive overview of environmental noise pollution. The book begins by covering the fundamentals of noise and acoustics, major noise sources, and prediction and evaluation techniques. Developments in noise measuring techniques and mapping, and improvement of legislation to control noise pollution are then discussed, and international regulations are presented. Technological advances and recent developments regarding strategy and action plans are also covered in depth. Key features: Summarizes the relevant international standards covering noise pollution and environmental engineering practice. Presents technological advances and recent developments regarding strategy and action plans. Covers developments in noise measuring techniques, prediction models, mapping, and improvement of legislation to control noise pollution. Environmental Noise and Management is a comprehensive resource for researchers and graduate students who are involved in noise pollution from the standpoint of environmental impact and control.

Readings in Hardware/Software Co-Design Giovanni De Micheli, Rolf Ernst, Wayne Wolf, 2002. This title serves as an introduction and reference for the field with the papers that have shaped the hardware/software co-design since its inception in the early 90s. *Applied Mechanics Reviews*, 1988.

Journal of Dynamic Systems, Measurement, and Control, 1997. Publishes theoretical and applied original papers in dynamic systems. Theoretical papers present new theoretical developments and knowledge for controls of dynamical systems together with clear engineering motivation for the new theory. Applied papers include modeling, simulation, and corroboration of theory with emphasis on demonstrated practicality.

Sixth IEEE International High-Level Design Validation and Test Workshop, 2001. Eighteen full papers and eight short presentations from international engineers and researchers discuss current developments, new methodologies, and emerging trends in design verification and test. The focus of the sixth conference was on hardware/software embedded systems and system-on-chips. Topics include, for example, the automatic validation of pipeline specifications, the use of sequential ATPG for model checking, formal verification of the Pentium 4 multiplier, and using cutwidth to improve symbolic simulation and Boolean satisfiability.
