Mathematical Formulas for Economists Bernd Luderer,Volker Nollau,Klaus Vettters,2005-11-21 This

collection of formulas constitutes a compendium of mathematics for economics and business. It contains the most important formulas, statements, and algorithms in this significant subfield of modern mathematics and addresses primarily students of economics or business at universities, colleges, and trade schools. But people dealing with practical or applied problems will also find this collection to be an efficient and easy-to-use work of reference. First, the book treats mathematical symbols and constants, sets, and statements, number systems, and their arithmetic, as well as fundamentals of combinatorics. The chapter on sequences and series is followed by mathematics of finance, the representation of functions of one and several independent variables, their differential and integral calculus, and by differential and difference equations. In each case, special emphasis is placed on applications and models in economics. The chapter on linear algebra deals with matrices, vectors, determinants, and systems of linear equations. This is followed by the representation of structures and algorithms of linear programming. Finally, the reader finds formulas on descriptive statistics, data analysis, ratios, inventory, and time series analysis, on probability theory, events, probabilities, random variables, and distributions, and on inductive statistics, point and interval estimates, tests. Some important tables complete the work.

FEATURES An intelligent approach to teaching mathematics based on years of experience. Mathematical rigour and a strong focus on mathematical reasoning. Large selection of worked examples throughout the book. These are not just specific to economics, as most topics are first dealt with from a purely mathematical point of view, before providing economic insight. Large number of problems for students to solve. Answers to selected questions included in the back of the book.

CHANGES TO THIS EDITION New Chapter 17 on linear programming. All chapters revised and updated. Even more economic examples and problem material added. Extensive resources for students and lecturers on the companion website. The book is by far the best choice one can make for a course on mathematics for economists. It is exemplary in finding the right balance between mathematics and economic examples.

Dr Roelof J Stroeker, Erasmus University, Rotterdam. The writing style is superb. I found that the style of writing promotes interest and manages to allow intuitive understanding whilst not sacrificing mathematical precision and rigour.
