

## Absorption Costing or Full Costing System:

### Definition and explanation:

**Absorption costing** is a costing system which treats all costs of production as product costs, regardless whether they are variable or fixed. The cost of a unit of product under absorption costing method consists of [direct materials](#), [direct labor](#) and both variable and fixed overhead. Absorption costing allocates a portion of fixed manufacturing overhead cost to each unit of product, along with the variable manufacturing cost. Because absorption costing includes all costs of production as [product costs](#), it is frequently referred to as *full costing method*.

## Variable, Direct or Marginal Costing:

### Definition and explanation:

**Variable costing** is a costing system under which those costs of production that vary with output are treated as [product costs](#). This would usually include [direct materials](#), [direct labor](#) and variable portion of manufacturing overhead. Fixed manufacturing cost is not treated as a [product costs](#) under variable costing. Rather, fixed manufacturing cost is treated as a [period cost](#) and, like selling and administrative expenses, it is charged off in its entirety against revenue each period. Consequently the cost of a unit of product in inventory or [cost of goods sold](#) under this method does not contain any fixed overhead cost. Variable costing is some time referred to as *direct costing* or *marginal costing*. To complete this summary comparison of absorption and variable costing, we need to consider briefly the handling of selling and administrative expenses. These expenses are never treated as [product costs](#), regardless of the costing method in use. Thus under either absorption or variable costing, both variable and fixed selling and administrative expenses are always treated as [period costs](#) and deducted from revenues as incurred.

The concepts explained so far are illustrated below

Cost classifications—Absorption versus variable costing		
Absorption Costing		Variable Costing
Product cost	Direct materials Direct Labor Variable Manufacturing overhead	Product cost
Period cost	Fixed manufacturing overhead Variable selling and administrative expenses Fixed selling and administrative expenses	Period cost

## Unit Cost Computation/Calculation:

To illustrate the computation/calculation of unit product costs under both absorption and variable costing consider the following example.

### Example:

A small company that produces a single product has the following cost structure.

Number of units produced	6,000
<b>Variable costs per unit:</b>	
Direct materials	\$2
Direct labor	\$4
