

This lit bulb is part of an AC circuit. The coil of wire in the background would have no effect on a DC circuit, but is a key component of an AC circuit. It is called an “inductor.”

## 1 Introduction

In this lab, we will conclude our study of Alternating Current (AC) electricity by looking in detail at how circuits behave when an AC voltage is applied. The previous labs have taught us that AC is the natural choice for easy power generation and transmission. Therefore, it is important to understand how various types of circuit elements behave in the AC mode.

For our purposes, circuit elements can broadly be classified into three ideal devices: resistors, capacitors, and inductors, denoted by  $R$ ,  $C$ , and  $L$  respectively. Many real-world devices can be modeled as combinations of these. Electric motors, for instance, are mostly inductive in nature, with a non-negligible amount of internal resistance; we can model this as a series combination of an inductor and a resistor. Your toaster oven, on the other hand, is almost completely resistive and can be modeled simply as a resistor. Finally, a radio has a tuning circuit that is inductive and capacitive. When you turn to a specific station, you are varying a capacitor in the radio tuning circuit so that it is in resonance with the broadcast frequency of the station.

An important property of resistors is that if an alternating current flows through them, the voltage drop across them is proportional to the current. In Sections 5-7 you will discover that this is *not* true for capacitors and inductors; while the voltage drop is still a sine wave, it is *phase shifted* relative to the current. To better understand the behavior of the AC circuits, we will be using **phasors** to represent voltages and currents. While some textbooks may contain a definition of phasors, the discussion of their use is typically limited, so we have included a discussion of their use in Section 2 (note also that conventions may vary between textbooks.)

Many systems have a “natural” frequency at which they tend to oscillate. Examples you have
