 Expanded Volume , Geometry with an Introduction to Cosmic Topology Michael P. Hitchman, 2009 The content of
 Geometry with an Introduction to Cosmic Topology is motivated by questions that have ignited the imagination of stargazers
 since antiquity What is the shape of the universe Does the universe have and edge Is it infinitely big Dr Hitchman aims to
 clarify this fascinating area of mathematics This non Euclidean geometry text is organized into three natural parts Chapter 1
 provides an overview including a brief history of Geometry Surfaces and reasons to study Non Euclidean Geometry Chapters

2 7 contain the core mathematical content of the text following the ErlangenProgram which develops geometry in terms of a space and a group of transformations on that space Finally chapters 1 and 8 introduce chapter 1 and explore chapter 8 the topic of cosmic topology through the geometry learned in the preceding chapters

Engineering Mathematics with Mathematica John S. Robertson, 1995 This supplementary text for applied mathematics courses where Mathematica is used in a laboratory setting is intended to be compatible with a broad range of engineering mathematics texts as well as smaller more specialized texts in differential equations and complex variables It covers topics found in courses on ordinary and partial differential equations vector analysis and applied complex analysis Students are guided through a series of laboratory exercises that present cogent applications of the mathematics and demonstrate the use of Mathematica as a computational tool to do the mathematics Relevant applications along with discussions of the results obtained combine to stimulate innovative thinking from the students about additional concepts and applications

Engineering Mathematics with Maple John S. Robertson, 1996 This book is intended for use as a supplemental tool for courses in engineering mathematics applied ordinary and partial differential equations vector analysis applied complex analysis and other advanced courses in which MAPLE is used Each chapter has been written so that the material it contains may be covered in a typical laboratory session of about 1 1/2 to 2 hours The goals for every laboratory are stated at the beginning of the chapter Mathematical concepts are then discussed within a framework of abundant engineering applications and problem solving techniques using MAPLE Each chapter is also followed by a set of exploratory exercises that are intended to serve as a starting point for a student's mathematical experimentation Since most of the exercises can be solved in more than one way there is no answer key for either students or professors

Algebra Mark Steinberger, 1994 The intent of this book is to introduce readers to algebra from a point of view that stresses examples and classification Whenever possible the main theorems are treated as tools that may be used to construct and analyze specific types of groups rings fields modules etc Sample constructions and classifications are given in both text and exercises

An Introduction to Topology and Homotopy Allan J. Sieradski, 1992 This text is an introduction to topology and homotopy Topics are integrated into a coherent whole and developed slowly so students will not be overwhelmed

Intermediate Algebra Dennis Weltman, Gilbert Perez, 1994 Intended to prepare readers with low or no algebraic skills and math anxiety for credit level mathematics courses this book balances precise mathematics with an informal style
