A Practical Guide to MR-Linac Indra J. Das, Filippo Alongi, Poonam Yadav, Bharat B. Mittal, 2024-03-20 This book offers a detailed guide to MR Linac a unique and fast growing radiation treatment modality MR linac is new technology that is a fusion of an MRI and a linear accelerator on the same gantry It can change both target volume delineation and tumor visualization in real time using MR cine images and treatment Tumor location changes moment to moment as radiation is delivered but this cannot be visualized in current radiation therapy practices This new and rapidly growing technology can provide adaptive therapy that was not possible before This book presents current knowledge on MR linac technology clinical practices and ultimately patient outcome where dose escalation is not possible due to limiting normal tissue structures in the vicinity of tumor There are two commercial MR linac machines under consideration and both will be covered in detail The book is divided into four sections The first gives a general introduction to MR Linac covering the role of MRI in radiation oncology the clinical necessity of this technology and patient selection The next section details the physics and technology of MR Linac covering image sequence motion management and treatment planning Section three offers the clinical applications of MR Linac and is divided by body area including lung prostate and breast Finally the fourth section looks to the future and what this technology can mean for radiation oncology This is an ideal guide for radiation oncologists medical physicists and relevant trainees

Quality and Safety in Radiation Oncology Adam P. Dicker,Eric C. Ford,Tim R. Williams,2016-08-17 *Quality and Safety in Radiation Oncology* is the first book to provide an authoritative and evidence based guide to the understanding and implementation of quality and safety procedures in radiation oncology practice Alongside the rapid growth of technology and radiotherapy treatment options for cancer in recent years quality and safety standards are not only of the utmost importance but best practices ensuring quality and safety are crucial aspect of modern radiation oncology training A detailed exploration and review of these standards is a necessary part of radiation oncologist s professional competency both in the clinical setting and at the study table while preparing for board review and MOC exams

Chapter topics range from fundamental concepts of value and quality to commissioning technology and the use of metrics. They include perspectives on quality and safety from the patient, third party payers as well as from the federal government. Other chapters cover prospective testing of quality training and education, error identification and analysis, incidence reporting as well as special technology and procedures including MRI guided radiation therapy, proton therapy and stereotactic body radiation therapy, SBRT, quality and safety procedures in resource limited environments and more. State of the art quality assurance procedures and safety guidelines are the backbone of this unique and essential volume. Physicians, medical physicists, dosimetrists, radiotherapists, hospital administrators and other healthcare professionals will find this resource an invaluable compendium of best practices in radiation oncology. Key Features: Case examples illustrate best practices and pitfalls. Several dozen graphs, tables and figures help quantify the discussion of quality and safety throughout the text. Section II covers all aspects of quality assurance procedures for the physicist.

Medical Electron Accelerators C. J. Karzmark, Craig S. Nunan, Eiji Tanabe, 1993. Organized to serve as a ready reference, this book covers the design principles of operation of microwave electron linear accelerators for the radiation treatment of cancer. Designed for use by persons without extensive knowledge/experience of accelerator technology, the book assumes a knowledge of elementary physics/mathematics, places its emphasis on how accelerators actually function, how they are used in cancer treatment. Coverage includes the history of development, application, general theory of acceleration, accelerator systems, radiation beam systems, associated equipment, performance characteristics, testing, use. The major modules of a representative medical accelerator are described, including principles of operation, how these models function collectively to produce electron X-ray beams for radiotherapy.

Emerging Applications of Radiation Processing, 2004. This publication contains reports on the most recent developments in the implementation of radiation technology. Recent R & D trends are also discussed. The reports were prepared by leading international experts in the field. Technical solutions concerning electron accelerators, low, medium and high energy are reviewed, while newly developed e⁻ X high power units open new possibilities for bulk material processing. All the classical fields of radiation technology applications, such as sterilization, food irradiation, polymer processing and rubber

processing play an important economic role. Examples based on the two biggest market economies, the USA and Japan, are presented. Breakthroughs in environmental applications of radiation technology, opening new horizons in process applications and solutions applied to flue gas treatment and wastewater treatment, are reported. In the field of R D, the most promising fields are natural polymers and nanotechnology. This book will be of interest to scientists, engineers, managers, and students working in the field of radiation processing.
