

The Half-life of Pennies Lab

(Complete your pennies in approximately 15 days)

Approximately 100 million (over 100,000,000) pennies are still being made each year! That's a really, really big number! Almost 100 million pennies are made each year in a special facility maintained in the suburbs during winter so that some more silver, "minted" pennies can be made. Every 5-10 years, half of the pennies are in a special experiment through an invisible chemical reaction that happens, so the following table you will see from pennies over time that come out of "mint".

Materials: 100 pennies in large container with a lid

Procedure:

1. Count **100 pennies** before you start. Figure out.

2. Count remaining until you have the "usual" size of the container/pennies.

Remember number of pennies removed (half) and the number of pennies remaining.

Record in the descriptive table. Repeat the system with the number of pennies that remain. Repeat until the system reaches zero. Repeat until you have 100 pennies.

Class Table:

Initial Number	Number of Coins remaining	Number of Coins removed
100	50	50
50	25	25
25	12	13
12	6	6
6	3	3
3	1	2
1	0	1
0	0	0

3. Repeat this process until you reach zero and fill in the table. Remember to record why the coins change "heads".

4. Create a graph to plot your data. Label the axes: "Number of coins", "number of coins remaining", "time that your data table, plotting number of coins remaining on each trial".
