Unmanned Combat Aerial Vehicles Dan Gettinger, 2021-09 The field of unmanned combat aerial vehicles UCAVs is rapidly diversifying as an array of light midsized and heavy UCAVs and munitions enter the global marketplace This has the potential to dramatically expand access to armed unmanned platforms and change the way unmanned aerial vehicles are used in combat The influence of UCAVs on the conduct of war has already been felt in conflicts in the Caucasus the Middle East and North Africa where state and non state actors have fielded a

dizzying number of UCAVs from around the world At the same time advanced militaries are beginning to equip UCAVs with increasingly sophisticated munitions some of which are heavier and can fly farther than the types of weapons used by UCAVs in the past The first in a new series of Strategic Handbooks from Harpia Publishing presents an essential guide to the world of armed unmanned aircraft It features profiles of every unmanned combat aerial vehicles UCAVs currently in active military service or under development as well as other unmanned aerial vehicles that could potentially be armed in the future

Unmanned Aerial Vehicles Kimon P. Valavanis,2014-10-16 Unmanned Aircraft Systems UAS have seen unprecedented levels of growth during the last decade in both military and civilian domains However it is anticipated that civilian applications will be dominant in the future although there are still barriers to be overcome and technical challenges to be met For example integrating UAS into civilian space fully autonomous navigation see detect and avoid systems smart UAS designs system integration vision based navigation logistics and training to name but a few areas will be of prime importance in the near future This special volume is the outcome of research presented at the International Symposium on Unmanned Aerial Vehicles held in Dubai in June 2010 and presents state of the art findings on topics related to UAS operations and integration into the national airspace system UAS navigation and control micro mini small UAVs UAS simulation testbeds and frameworks UAS research platforms and applications UAS applications This book aims at serving as a guide tool on UAS for engineers and practitioners academics government agencies and industry This is a hardbound spinoff from the Journal of Intelligent and Robotic Systems Volume 61 1 4 2011

Advances in Unmanned Aerial Vehicles Kimon P. Valavanis,2008-02-26 The past decade has seen tremendous interest in the production and refinement of unmanned aerial vehicles both fixed wing such as airplanes and rotary wing such as helicopters and vertical takeoff and landing vehicles This book provides a diversified survey of research and development on small and miniature unmanned aerial vehicles of both fixed and rotary wing designs From historical background to proposed new applications this is the most comprehensive reference yet

K. Garg, 2021 This book provides an overview of the basic concepts and components of UAVs the various sensors used architecture of autonomous UAVs communication tools and devices **Design Optimization of Unmanned Aerial Vehicles** Athanasios Papageorgiou, 2019-11-13 Over the last years Unmanned Aerial Vehicles UAVs have gradually become a more efficient alternative to manned aircraft and at present they are being deployed in a broad spectrum of both military as well as civilian missions This has led to an unprecedented market expansion with new challenges for the aeronautical industry and as a result it has created a need to implement the latest design tools in order to achieve faster idea to market times and higher product performance As a complex engineering product UAVs are comprised of numerous sub systems with intricate synergies and hidden dependencies To this end Multidisciplinary Design Optimization MDO is a method that can identify systems with better performance through the concurrent consideration of several engineering disciplines under a common framework Nevertheless there are still many limitations in MDO and to this date some of the most critical gaps can be found in the disciplinary modeling in the analysis capabilities and in the organizational integration of the method As an aeronautical product UAVs are also expected to work together with other systems and to perform in various operating environments In this respect System of Systems SoS models enable the exploration of design interactions in various missions and hence they allow decision makers to identify capabilities that are beyond those of each individual system As expected this significantly more complex formulation raises new challenges regarding the decomposition of the problem while at the same time it sets further requirements in terms of analyses and mission simulation In this light this thesis focuses on the design optimization of UAVs by enhancing the current MDO capabilities and by exploring the use of SoS

models Two literature reviews serve as the basis for identifying the gaps and trends in the field and in turn five case studies try to address them by proposing a set of expansions On the whole the problem is approached from a technical as well as an organizational point of view and thus this research aims to propose solutions that can lead to better performance and that are also meaningful to the Product Development Process PDP Having established the above foundation this work delves firstly into MDO and more specifically it presents a framework that has been enhanced with further system models and analysis capabilities efficient computing solutions and data visualization tools At a secondary level this work addresses the topic of SoS and in particular it presents a multi level decomposition strategy multi fidelity disciplinary models and a mission simulation module Overall this thesis presents quantitative data which aim to illustrate the benefits of design optimization on the performance of UAVs and it concludes with a qualitative assessment of the effects that the proposed methods and tools can have on both the PDP and the organization
