*Scheduling of Resource-Constrained Projects* Robert Klein,1999-11-30 Project management has become a widespread instrument enabling organizations to efficiently master the challenges of steadily shortening product life cycles global markets and decreasing profit margins With projects increasing in size and complexity their planning and control represents one of the most crucial management tasks This is especially true for scheduling which is concerned with establishing execution dates for the sub activities to be performed in order to complete the project The ability to manage projects where resources must be allocated between concurrent projects or even sub activities of a single project requires the use of commercial project management software packages However the results yielded by the solution procedures included are often rather unsatisfactory Scheduling of Resource Constrained Projects develops more efficient procedures which can easily be integrated into software packages by incorporated programming languages and thus should be of great interest for practitioners as well as scientists working in the field of project management The book is divided into two parts In Part I the project management process is described and the management tasks to be accomplished during project planning and control are discussed This allows for identifying the major scheduling problems arising in the planning process among which the resource constrained project scheduling problem is the most important Part II deals with efficient computer based procedures for the resource constrained project scheduling problem and its generalized version Since both problems are NP hard the development of such procedures which yield satisfactory solutions in a reasonable amount of computation time is very challenging and a number of new and very promising approaches are introduced This includes heuristic procedures based on priority rules and tabu search as well as lower bound methods and branch and bound procedures which can be applied for computing optimal solutions

**Project Scheduling under Limited Resources** Sönke Hartmann,2012-12-06 Approaches to project scheduling under resource constraints are discussed in this book After an overview of different models it deals with exact and heuristic scheduling algorithms The focus is on the development of new algorithms Computational experiments demonstrate

the efficiency of the new heuristics Finally it is shown how the models and methods discussed here can be applied to projects in research and development as well as market research

### **Resource-Constrained Project Scheduling** Arno

Sprecher,2012-12-06 Within a project human and non human resources are pulled together in a tempo raray organization in order to achieve a predefined goal d 20 p 187 That is in contrast to manufacturing management project management is directed to an end One major function of project management is the scheduling of the project Project scheduling is the time based arrangement of the activities comprising the project subject to precedence time and resource constraints d 4 p 170 In the 1950 s the standard methods MPM Metra Potential Method and CPM Cri tical Path Method were developed Given deterministic durations and precedence constraints the minimum project length time windows for the start times and critical paths can be calculated At the same time another group of researchers developed the Program Evaluation and Review Technique PERT d 19 73 and 90 In contrast to MPM and CPM random variables describe the activity durations Based on the optimistic most likely and pessimistic estimations of the activity durations an assumed Beta distribution is derived in order to calculate the distribution of the project duration the critical events the distribution of earliest and latest occurence of an event the distribution of the slack of the events and the probability of exceeding a date By the time the estimates of the distributions have been improved d e g 52 and 56 Nevertheless there are some points of critique concerning the estimation of the resulting distributions and probabilities d e g 48 49 and 50

### *Project Management with Dynamic Scheduling* Mario

Vanhoucke,2012-02-09 The topic of this book is known as dynamic scheduling and is used to refer to three dimensions of project management and scheduling the construction of a baseline schedule and the analysis of a project schedule s risk as preparation of the project control phase during project progress This dynamic scheduling point of view implicitly assumes that the usability of a project s baseline schedule is rather limited and only acts as a point of reference in the project life cycle Consequently a project schedule should especially be considered as nothing more than a predictive model that can be used for resource efficiency calculations time and cost risk analyses project tracking and performance measurement and so

on In this book the three dimensions of dynamic scheduling are highlighted in detail and are based on and inspired by a combination of academic research studies at Ghent University [www.ugent.be](http://www.ugent.be) in company trainings at Vlerick Leuven Gent Management School [www.vlerick.com](http://www.vlerick.com) and consultancy projects at OR AS [www.or-as.be](http://www.or-as.be) First the construction of a project baseline schedule is a central theme throughout the various chapters of the book and is discussed from a complexity point of view with and without the presence of project resources Second the creation of an awareness of the weak parts in a baseline schedule is discussed at the end of the two baseline scheduling parts as schedule risk analysis techniques that can be applied on top of the baseline schedule Third the baseline schedule and its risk analyses can be used as guidelines during the project control step where actual deviations can be corrected within the margins of the project's time and cost reserves [A Flexible Optimization Approach to Multi-resource, Multi-project Planning and Scheduling](#) Vallish C.
