### An introduction to Scicos

Writing the simulation of an hybrid dynamical system on graphs, using the powerful functions of the Scilab language is possible [1]. But it is time consuming and it is easy to insert bugs during the manual coding. To simplify this task, Scilab includes Scicos [2] a graphical hybrid dynamical systems modeler and simulation toolbox. Scicos is used for applications in control systems, communications, digital processing, queueing systems, and for study physical and biological systems. Whether Scicos graphical editor is for personal use, for school, or for research it offers a, an modern for creating diagrams of general hybrid dynamical systems, and simulating them.
Most of the Scicos graphical model parameters are written in Scilab language. For complete integration with Scilab, many communications and manipulations possibilities, Scicos is pre-loaded in Scilab and available for both Windows and Linux. To download Scicos Blocks the binary, pre-compiled Scilabsurfsciences version is sufficient.

### The Scicos Blocks internal structure

Each blocks is implemented by two functions:

- the interfacing function: written in Scilab language, it defines the graphical representation, the input, output and internal ports, signals and the user configurable parameters.
- the computational function: the real code used during the simulations. The computational functions can be written in Scilab language. For heavy developments, or in C. For maximum efficiency and speed. Further in
