- Cost Synergies: Savings from reducing redundant operations, better economies of scale, and optimized supply chains.

5 Walk me through a DCF analysis. Answer: Step 1: Project the target company's free cash flows (FCF) for a certain number of years, usually 5-10 years. FCF is calculated as EBIT (Earnings Before Interest and Taxes) minus taxes plus depreciation minus changes in working capital and capital expenditures. Step 2: Determine the terminal value at the end of the projection period, either by using the perpetuity growth model or exit multiples. Step 3: Discount both the projected free cash flows and terminal value to the present using the company's Weighted Average Cost of Capital (WACC). Step 4: The sum of the present values of the projected cash flows and the terminal value gives the enterprise value of the company.

6 What are the differences between a stock purchase and an asset purchase? Answer: Stock Purchase: The buyer acquires the shares of the target company, assuming all assets and liabilities. The target company continues to operate as a legal entity. Pros: Simpler for the seller, tax advantages for the buyer if structured as a tax-free reorganization. Cons: Buyer assumes all liabilities, including contingent and hidden ones.

Asset Purchase: The buyer selects specific assets and liabilities to acquire, often excluding unwanted liabilities. Pros: Allows the buyer to avoid acquiring liabilities and allows more flexibility in what's being purchased. Cons: May be more complex and time-consuming to execute, potential tax consequences for the seller.

- Regulatory Risk: Potential issues with antitrust or other regulatory authorities that could block or delay the deal.
- Financial Risk: Inadequate financing for the deal or assuming too much debt can negatively impact the acquirer's financial health.

8 What role does due diligence play in M A? Answer: Due diligence is a critical process where the acquiring company reviews the target's financials, operations, legal matters, and market position.
