

OAP-Sheep Eye Dissection 2017

The sheep eye is approximately the same size as the human eye. This dissection is designed to orientate you with the main ocular structures. As with all dissections, appropriate safety precautions should be taken:

- Wear gloves, eye protection and a lab coat or apron
- Take care when using sharp instruments – always cut away from yourself and never point instruments towards anyone.
- Read all the instructions before starting the dissection. Work at a steady pace, so you do not need to rush at the end
- Report **ANY** accident to a member of staff immediately

Procedure

- 1) Examine and identify the various parts of the eye, including any extraocular muscles, optic nerve, etc.
- 2)
- 3) Examine the cornea; look at the reflection of a bright light on the cornea. Remove the corneal epithelium (outermost layer) over half the cornea by gently abrading with the scalpel – what is the result on the quality of the light reflection?

- 4) Make a small upward incision into the anterior chamber, at the limbus. Using scissors cut round the limbus to remove the cornea. Take care to avoid penetrating the lens capsule as you do this. Observe the cornea. Is it transparent or not?
- 5) Carefully remove the lens by making a small incision in the lens capsule and applying gentle pressure to the eye. Examine the lens - observe transparency and feel the texture. Does it have magnification properties?
- 6) Look into the vitreous chamber – Can you see the retina?

The remaining steps must be carried out with the eye under water

- 7) Make 4 equidistant incisions from the limbus to the back of the eye, carefully cutting through the tough sclera. Now gently open the eye flat. Care must be taken to prevent the vitreous from escaping, as this will lead to loss of the retina.
- 8) Gently remove the vitreous – what happens to the retina?
- 9) Finally observe the back of the eye. The choroid, lying behind the retina, can be removed with a blunt probe. The iridescent appearance of some regions of the choroid is due to the presence of the tapetum lucidum.
