Soft Computing Applications Valentina Emilia Balas, Lakhmi C. Jain, Marius Mircea Balas, 2017-08-31 These two volumes constitute the Proceedings of the 7th International Workshop on Soft Computing Applications SOFA 2016 held on 24-26 August 2016 in Arad, Romania. This edition was organized by Aurel Vlaicu University of Arad, Romania; University of Belgrade, Serbia; in conjunction with the Institute of Computer Science, Iasi Branch of the Romanian Academy; IEEE Romanian Section; Romanian Society of Control Engineering and Technical Informatics; SRAIT Arad Section; General Association of Engineers in Romania; Arad Section; and BTM Resources Arad. The soft computing concept was introduced by Lotfi Zadeh in 1991 and serves to highlight the emergence of computing methodologies in which the accent is on exploiting the tolerance for imprecision and uncertainty to achieve tractability, robustness, and lower costs. Soft computing facilitates the combined use of fuzzy logic, neurocomputing, evolutionary computing, and probabilistic computing, leading to the concept of hybrid intelligent systems. The rapid emergence of new tools and applications calls for a synergy of scientific and technological disciplines in order to reveal the great potential of soft computing in all domains. The conference papers included in these proceedings, published post-conference, were grouped into the following areas of research: Methods and Applications in Electrical Engineering; Knowledge Based Technologies for Web Applications; Cloud Computing; Security Algorithms and Computer Networks; Biomedical Applications; Image, Text, and Signal Processing; Machine Learning and Applications; Business Process Management; Fuzzy Applications; Theory and Fuzzy Control; Computational Intelligence in Education; Soft Computing; Fuzzy Logic in Biometrics; SCFLB; Soft Computing Algorithms Applied in Economy, Industry, and Communication Technology; Modelling and Applications in Textiles. The book helps to disseminate advances in selected active research directions in the field of soft computing along with current issues and applications of related topics. As such, it provides valuable information for professors, researchers, and graduate students in the area of soft computing techniques and applications.

Advanced Biomedical Image Analysis Mark Haidekker, 2011-03-29 A comprehensive reference of cutting edge advanced techniques for quantitative image processing and analysis. Medical diagnostics and intervention and biomedical research rely progressively on imaging techniques, namely the ability to capture, store, analyze, and display images at the organ, tissue, cellular, and molecular level. These tasks are supported by increasingly powerful computer methods to process and analyze images. This text serves as an authoritative resource and self-study guide explaining sophisticated techniques of quantitative image analysis with a focus on biomedical applications. It offers both theory and practical examples for immediate application of the topics as well as for in-depth study. Advanced Biomedical Image Analysis presents methods in the four major areas of image processing: image enhancement and restoration; image segmentation; image quantification and classification; and image visualization. In each instance, the theory, mathematical foundation, and basic description of an image processing operator is provided, as well as a discussion of performance features, advantages, and limitations. Key algorithms are provided in pseudo-code to help with implementation.

and biomedical examples are included in each chapter Image registration storage transport and compression are also covered and there is a review of image analysis and visualization software Members of the academic community involved in image related research as well as members of the professional R D sector will rely on this volume It is also well suited as a textbook for graduate level image processing classes in the computer science and engineering fields
