Leroy Hulsey, 2005 The live load distribution factor DF equations provided by AASHTO LRFD for the decked precast prestressed concrete DPPC girder bridge system do not differentiate between a single or multilane loaded condition This practice results in a single lane load rating penalty for DPPC girder bridges The objective of this project is to determine DF equations which accurately predict the distribution factor of the DPPC girder bridge system when it is only subjected to single lane loading Eight DPPC girder bridges were instrumented Each bridge was loaded with a single load vehicle to simulate the single lane loaded condition The experimental data was used to calibrate 3D FE models and 2D grillage models of the DPPC girder bridge system The calibrated models were used to conduct a parametric study of the DPPC girder bridge system subjected to a single lane loaded condition Two sets of new equations that describe the single lane loaded distribution factor for both shear and moment forces of these bridges are proposed and compared with AASHTO LRFD DF equations **A Study on Acetabular Cup Deformation Measurement Methods and Finite Element Simulations** Kristopher K.
