Elementary Programming in Java Alawiyah Abd Wahab, Fathey Mohammed, Fauziah Baharom, Noradila Nordin, Norida Muhd Darus, Nurnasran Puteh, Rohaida Romli, Shafinah Farvin Packer Mohamed, Sharmila Mat Yusof, 2024-01-01 This book is designed to introduce fundamental programming techniques and problem solving methods to novice programming learners using the Java programming language It is organized into seven chapters which include an introduction to computer and programming language problem solving concepts numerical computation and expression selection control structures repetition control structures modularity using methods and arrays In addition the knowledge of Java programming language is gained by learning its syntax and standard coding conventions At the end of each chapter the learners are provided with hands on case studies to assist them in understanding and applying the concepts introduced in the chapter A set of questions is also included in each chapter to test their understanding and encourage them to practice developing their programming skills Learners need to keep in mind that programming is best acquired by understanding and doing practices It is hoped that the learners will enjoy reading and get benefit from this book This book can be used as a starting point of reference in their journey to become expert programmers

Elementary Synchronous Programming Ali S. Janfada, 2019-06-04 Algorithms are the essence of programming After their construction they have to be translated to the codes of a specific programming language There exists a maximum of ten basic algorithmic templates This textbook aims to provide the reader with a more convenient and efficient method to create a program by translating algorithms template by template with C and Java This is the slogan of the book You will be a professional programmer whenever you become a skilled algorithm designer This book attempts to gradually strengthen the readers ability to identify and analyze the mental commands which are issued and implemented in their brains for solving the problems in which mathematical computations are applied and try to design an algorithm based on their understanding and analyses It then seeks to encourage the readers to develop their skills in

algorithm writing for computational problems and synchronously teach them to translate the algorithms into C and Java codes using the least necessary keywords [Java](#) Harvey M. Deitel, Paul J.
