Java Threads Scott Oaks, Henry Wong, 1999 Threads Computer programs

Java Distributed Computing Jim Farley, 1998-01-01 Distributed computing and Java go together naturally As the first language designed from the bottom up with networking in mind Java makes it very easy for computers to cooperate Even the simplest applet running in a browser is a distributed application if you think about it The client

running the browser downloads and executes code that is delivered by some other system. But even this simple applet wouldn't be possible without Java's guarantees of portability and security: the applet can run on any platform and can't sabotage its host. Of course, when we think of distributed computing, we usually think of applications more complex than a client and server communicating with the same protocol. We usually think in terms of programs that make remote procedure calls, access remote databases, and collaborate with others to produce a single result. Java Distributed Computing discusses how to design and write such applications. It covers Java's RMI Remote Method Invocation facility and CORBA, but it doesn't stop there; it tells you how to design your own protocols to build message passing systems and discusses how to use Java's security facilities, how to write multithreaded servers, and more. It pays special attention to distributed data systems, collaboration, and applications that have high bandwidth requirements. In the future, distributed computing can only become more important. Java Distributed Computing provides a broad introduction to the problems you'll face and the solutions you'll find as you write distributed computing applications.

Topics covered in *Java Distributed Computing Introduction to Distributed Computing Networking Basics Distributed Objects Overview of CORBA and RMI Threads Security Message Passing Systems Distributed Data Systems Databases Bandwidth Limited Applications Collaborative Systems* [Oracle PL/SQL Programming](#) Steven Feuerstein, 1999. This guide is designed to bring you up to speed as quickly as possible on the new PL/SQL features of Oracle8i. It covers autonomous transactions, invoker rights, new built-in packages, and much more. *Linux Network Administrator's Guide* Olaf Kirch, Terry Dawson, 2000. This introduction to networking on Linux now covers firewalls, including the use of ipchains and Netfilter, masquerading, and accounting. Other new topics in this second edition include Novell NCP, IPX support, and INN news administration. **Programming Python, 3/E** Mark Lutz, 2006-01-01. Whether you're a novice or an advanced practitioner, you'll find this refreshed book more than lives up to its reputation. *Programming Python Third Edition* teaches you the right way to code. It explains Python language syntax and programming techniques in a clear and concise manner, with numerous examples that illustrate both correct usage and common idioms. By reading this comprehensive guide, you'll learn how to apply Python in real-world problem domains such as **Python Programming** John M. Zelle, 2004. This book is suitable for use in a university-level first course in computing (CS1) as well as the increasingly popular course known as CS0. It is difficult for many students to master basic concepts in computer science and programming. A large portion of the confusion can be blamed on the complexity of the tools and materials that are traditionally used to teach CS1 and CS2. This textbook was written with a single overarching goal: to present the core concepts of computer science as simply as possible without being simplistic. *Checking C Programs with Lint* Ian F. Darwin, 1988. Using lint: Dealing with lint's concerns; Using lint in detail; Limits to lint; Under the hood: An evaluation of lint; Future directions; Appendixes; Bibliography; Index. *Computational Modeling and Visualization of Physical Systems with Python* Jay Wang, 2016-01-11. *Computational Modeling* by Jay Wang introduces computational modeling and visualization of physical

systems that are commonly found in physics and related areas The authors begin with a framework that integrates model building algorithm development and data visualization for problem solving via scientific computing Through carefully selected problems methods and projects the reader is guided to learning and discovery by actively doing rather than just knowing physics
