most of it is noise You don't want to play with AI You want to build something valuable useful and profitable That's exactly why AI Chatbot Development Agency exists This book is not about hype buzzwords or vague promises It is a clear practical step by step blueprint for building domain specific AI chatbots that businesses actually need and are happy to pay for If you've ever wanted to start an AI automation agency offer high value services or position yourself as a trusted AI expert instead of just another developer this book shows you how Most AI books teach tools This book teaches thinking positioning and outcomes Businesses don't want a chatbot They want fewer support tickets faster sales smoother HR operations and lower costs This book trains you to think like an AI consultant and agency builder not a coder stuck solving the wrong problems You'll learn how to translate real business pain into AI powered solutions that feel like digital employees not gimmicks And here's the opportunity most people are missing Domain specific AI bots are the next goldmine While everyone else is building generic bots you'll know how to design solutions for customer service HR real estate healthcare and any industry with clarity confidence and credibility This isn't just a book you read It's a future you step into By the end you won't just understand AI You'll know how to Design chatbots that feel human helpful and trustworthy Build real world AI systems without getting overwhelmed by tech Package AI services in a way clients instantly understand and want Price confidently close deals and scale like a real agency Position yourself as an authority someone businesses listen to You're not buying chapters You're buying clarity confidence and a repeatable business model Right now businesses are confused about AI but they know they need it That gap creates massive opportunity for people who can explain design and deliver practical AI solutions If you don't step into that role someone else will This book saves you years of trial and error insecurity and underpricing yourself It gives you a proven way to move from I'm learning AI to I run an AI automation agency that solves real problems Why readers should choose this book Because it respects your intelligence Because it speaks your language Because it doesn't try to impress it tries to transform It's written to make you feel capable empowered and ahead of the curve Not overwhelmed Not confused Not dependent on luck If you're motivated by freedom relevance impact and income and you want a skillset that will still matter years from now this book was written for you You don't just buy this book You invest in becoming someone who understands where AI is going and knows exactly how to profit from it And once you see that future clearly buying this book becomes a no brainer

*Developing Enterprise Chatbots* Boris Galitsky, 2019 A chatbot is expected to be capable of supporting a cohesive and coherent conversation and be knowledgeable which makes it one of the most complex intelligent systems being designed nowadays Designers have to learn to combine intuitive explainable language understanding and reasoning approaches with high performance statistical and deep learning technologies Today there are two popular paradigms for chatbot construction 1 Build a bot platform with universal NLP and ML capabilities so that a bot developer for a particular enterprise not being an expert can populate it with training data 2 Accumulate a huge set of training dialogue data feed it to a deep learning network and expect the trained chatbot to automatically learn how to chat Although these two

approaches are reported to imitate some intelligent dialogues both of them are unsuitable for enterprise chatbots being unreliable and too brittle The latter approach is based on a belief that some learning miracle will happen and a chatbot will start functioning without a thorough feature and domain engineering by an expert and interpretable dialogue management algorithms Enterprise high performance chatbots with extensive domain knowledge require a mix of statistical inductive deep machine learning and learning from the web syntactic semantic and discourse NLP ontology based reasoning and a state machine to control a dialogue This book will provide a comprehensive source of algorithms and architectures for building chatbots for various domains based on the recent trends in computational linguistics and machine learning The foci of this book are applications of discourse analysis in text relevant assessment dialogue management and content generation which help to overcome the limitations of platform based and data driven based approaches Supplementary material and code is available at <https://github.com/bgalitsky> relevance based on parse trees
