The word DevOps is a contraction of Development and Operations. DevOps is a set of best practices that emphasize the collaboration and communication of IT professionals, developers, operators, and support staff in the lifecycle of applications and services, leading to Continuous Integration (merging all developed working copies to a shared mainline several times a day), Continuous Deployment (release continuously or as often as possible), and Continuous Feedback (seek feedback from stakeholders during all lifecycle stages). The DevOps practices covered in this certification are derived from the Three Ways: The First Way is to enable the work to move fast from left to right from Development to Operations to the customer; The Second Way is to enable feedback to go fast from right to left from all stakeholders back into the value stream; The Third Way is to enable learning by creating a high-trust culture of experimentation and risk-taking. Moreover, the crucial subjects of security in all stages and maintaining compliance during change are covered. The certification has been developed in cooperation with experts in the DevOps work field. Recommended pre-knowledge: Agile, Lean, and/or IT Service Management (for instance through the EXIN Agile Scrum Foundation exam, LITA Lean IT Foundation exam, or EXIN IT Service Management Foundation based on ISO IEC 20000 exam) is recommended.
