Handbook of Approximation Algorithms and Metaheuristics Teofilo F. Gonzalez,2007-05-15 Delineating the tremendous growth in this area the Handbook of Approximation Algorithms and Metaheuristics covers fundamental theoretical topics as well as advanced practical applications It is the first book to comprehensively study both approximation

algorithms and metaheuristics Starting with basic approaches the handbook presents the methodologies to design and analyze efficient approximation algorithms for a large class of problems and to establish inapproximability results for another class of problems It also discusses local search neural networks and metaheuristics as well as multiobjective problems sensitivity analysis and stability After laying this foundation the book applies the methodologies to classical problems in combinatorial optimization computational geometry and graph problems In addition it explores large scale and emerging applications in networks bioinformatics VLSI game theory and data analysis Undoubtedly sparking further developments in the field this handbook provides the essential techniques to apply approximation algorithms and metaheuristics to a wide range of problems in computer science operations research computer engineering and economics Armed with this information researchers can design and analyze efficient algorithms to generate near optimal solutions for a wide range of computational intractable problems

Design and analysis of Algorithms,2/e Himanshu B. Algorithmic Studies in Mass Storage Systems C.K. Wong,2012-12-06 A major technological trend for large database systems has been the introduction of ever larger mass storage systems This allows computing centers and business data processing installations to maintain on line their program libraries less frequently used data files transaction logs and backup copies under unified system control Tapes disks and drums are classical examples of mass storage media The more recent IBM 3851 Mass Storage Facility part of the IBM 3850 Mass Storage System represents a new direction in mass storage development namely it is two dimensional With the maturity of magnetic bubble technology more sophisticated massive multi trillion bit storage systems are not far in the future While large in capacity mass storage systems have in general relatively long access times Since record access probabilities are usually not uniform various algorithms have been devised to position the records to decrease the average access time The first two chapters of this book are devoted mainly to such algorithmic studies in linear and two dimensional mass storage systems In the third chapter we view the bubble memory as more than a storage medium In fact we discuss different structures where routine operations such as data rearrangement sorting searching etc can be done in the memory itself freeing the CPU for more complicated tasks The problems discussed in this book are combinatorial in nature
