Bryant,John

Edwards, R. Scott Tindale, Emil J. Posavac, Linda Heath, Aaron Henderson-King, Yolanda Suarez-Balcazar, 2013-11-11 Many authors have argued that applying social psychology to the solution of real world problems builds better theories Observers have claimed for example that of human behavior applied social psychology reveals more accurate principles because its data are based on people in real life circumstances Helmreich 1975 Saxe Leventhal 1980 and discloses important gaps in existing theories Fisher 1982 Mayo LaFrance 1980 Undoubtedly many concrete examples can be mustered in support of these claims But it also can be argued that applying social psychology to social issues and problems builds better research methods Special methodological problems arise and new perspectives on old methodological problems emerge when researchers leave the laboratory and tackle social problems in real world settings Along the way we not only improve existing research techniques but also develop new research tools all of which enhance our ability to obtain valid results and thereby to understand and solve socially relevant problems Indeed Campbell and Stanley's 1966 seminal work on validity in research design grew out of the application of social science in field settings In this spirit the principal aim of this volume is to present examples of methodological advances being made as researchers apply social psychology in real life settings

*Collaborative Dialogue Technologies in Distance Learning* M. Felisa Verdejo, Stefano A. Cerri, 2012-12-06 In April 1993 an interdisciplinary NATO Advanced Research Workshop on Collaborative dialogue technologies in distance learning was held in Segovia Spain The workshop brought together researchers in fields related to distance learning using computer mediated communication The statement of justification of the NATO ARW follows hereafter Justification of the NATO Advanced Research Workshop on Collaborative Dialogue Technologies in Distance Learning Computer Mediated Communication CMC systems have features that reduce some temporal physical and social constraints on communication Theories of communication have shifted from viewing communication as a linear transmission of messages by a sender to a receiver to viewing it as a social paradigm where individuals are actors in a network of interdependent relationships embedded in organizational and social structures Recent research focuses on models of information sharing to support not only the activities of individuals but also the problem solving activities of groups such as decision making planning or co writing This area of research is called Computer Supported Cooperative Work CSCW The Artificial Intelligence AI approach uses knowledge based systems to enhance and facilitate all these processes including the possibility of using natural language The traditional model of distance education places a strong emphasis on independent study supported by well developed learning materials This model can be characterized as one way media However the potential of CMC to provide better guidance to the student in Higher Distance Education has been quickly recognized for at least two kind of activities information sharing and interaction

*Reference and Information Services* Richard E. Bopp, Linda

C. Smith, 2001 Thoroughly revised and expanded to reflect current developments in the field this text is designed to provide the beginning student of library and information science with an overview of the most important tools for general reference

work and the concepts and theory behind today's reference services. The 21 chapters are divided into two parts. The first 11 chapters deal with concepts and theory and are topical. They cover such areas as ethical aspects of reference services, reference interview, the principles and goals of library instruction, bibliographic control and search strategies, training and continuing education for reference staff, the evaluation of reference services and the management of these services. In many cases, specific applications in different types of libraries are pointed out. Expanded coverage of electronic reference service is provided by two full chapters devoted to basic principles and current trends in this area. A separate chapter covers unique approaches to reference service for special groups. Part 2 describes the general principles and sources for selecting and evaluating reference tools and the principles for building a reference collection. The remaining chapters discuss the characteristics and uses of particular types of reference tools. This new edition describes a greater number of titles of each type as well as the formulation of strategies for the effective use of specific sources or groups of sources. Scenarios in particular library settings conclude each chapter, offering realistic reference questions and appropriate search strategies. Throughout the text, boxes are used to highlight specific issues, concepts, and search strategies that underlie contemporary reference services. Selected important sources for further reading are listed at the end of each chapter. This text presents the essential theory and practical knowledge necessary for an initial reference course. Its broad scope and organizational clarity should benefit students and practitioners alike.
