Properties of Matter

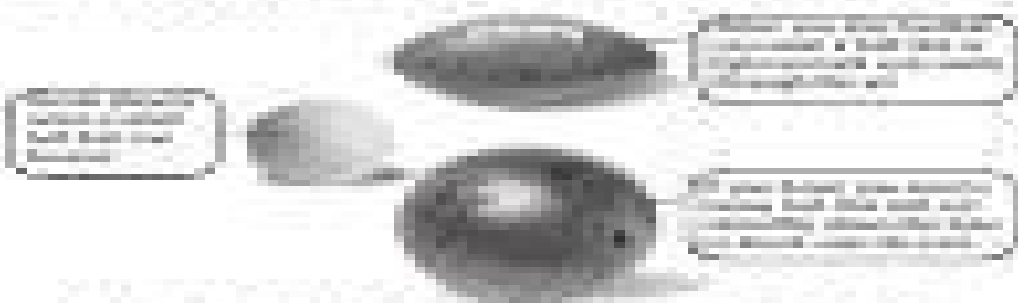

QUESTIONS

Are you able to determine, from these questions, the subject of the following chapters, and classify them into groups?

- Which are physics, chemistry, and biology chapters?
- Which are Mathematics and computer science chapters?

What Are Physical Properties?

Start with the matter in the chapter below as you will be a well-informed person if you know properties.

A physical property is a characteristic that can be observed without changing the identity of the substance. However, the properties of an object change as it reacts. For example, you can identify an object's color, taste, shape, and its weight. However, the properties of an object are determined by the properties of the particles that it is made up of.

Many of the physical properties of materials that make up objects can be measured. These properties include weight, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties than a smaller amount of the material. Other physical properties do not depend on how much of the material you have. They show that no matter how large or small something is, it has the same physical property or always the same
