Algorithms Kenneth A. Berman, Jerome L. Paul, 2005. *Algorithms: Sequential, Parallel, and Distributed* offers in-depth coverage of traditional and current topics in sequential algorithms as well as a solid introduction to the theory of parallel and distributed algorithms. In light of the emergence of modern computing environments such as parallel computers, the Internet, and cluster and grid computing, it is important that computer science students be exposed to algorithms that exploit these technologies. Berman and Paul's text will teach students how to create new algorithms or modify existing algorithms, thereby enhancing students' ability to think independently.

Knapsack Problems Silvano Martello, Paolo Toth, 1990-12-14. Here is a state-of-the-art examination on exact and approximate algorithms for a number of important NP-hard problems in the field of integer linear programming, which the authors refer to as knapsack. Includes not only the classical knapsack problems such as binary, bounded, unbounded, or binary multiple, but also less familiar problems such as subset sum and change making. Well-known problems that are not usually classified in the knapsack area, including generalized assignment and bin packing, are also covered. The text fully develops an algorithmic approach without losing mathematical rigor.

Data Structures, Algorithms, and Object-oriented Programming Gregory L. Heileman, 1996. **Foundations of Algorithms** Richard E. Neapolitan, Kumar S. Naimipour, 1998. *Foundations of Algorithms Using C Pseudocode* offers a well-balanced presentation on designing algorithms, complexity analysis of algorithms, computational complexity that is accessible to mainstream computer science students who have a background in college algebra, discrete structures, and graphs. To support their approach, the authors present mathematical concepts using Standard English, a simpler notation than is found in most texts. A review of essential mathematical concepts is presented in three appendices. In addition, they reinforce the explanations with numerous concrete examples to help students grasp theoretical concepts.

Algorithms and Data Structures, 1997. *Programs and Courses* University of Northern Iowa, 2002. **Combinatorial Algorithms** Te-Chiang Hu, 1982. Updated second edition presents algorithms for shortest paths, maximum flows, dynamic programming, and backtracking. Also discussed are binary trees, heuristic and near-optimums, matrix multiplication, and NP-complete problems. New to this edition: how to mix known algorithms and create new ones. Features 153 black and white illustrations and 23 tables. Exercises with answers at the ends of chapters.
