S., 2018-01-01 This self readable and student friendly text provides a strong programming foundation to solve problems with C language through its well supported structured programming methodology, rich set of operators and data types. It is designed to help students build efficient and compact programs. The book now in its second edition is an extended version of Dr M T Somashekara's previous book titled as Programming in C. In addition to two newly introduced chapters on Graphics using C and Searching and Sorting, all other chapters of the previous edition have been thoroughly revised and updated. The usage of pseudocodes as a problem solving tool has been explored throughout the book before providing C programming solutions for the problems wherever necessary. This book comes with an increased number of examples, programs, review questions, programming exercises, and interview questions in each chapter. Appendices, glossary, MCQs with answers, and solutions to interview questions are given at the end of the book. The book is eminently suitable for students of Computer Science, Computer Applications, and Information Technology at both undergraduate and postgraduate levels. Assuming no previous knowledge of programming techniques, this book is appropriate for all those students who wish to master the C language as a problem solving tool for application in their respective disciplines.
