Method of Least Squares (Least Squares Regression):

Examp 6.1:

$$q = \sum_{i=1}^n (y_i - a - bx_i)^2 \quad : \text{Sum of squares of errors}$$

x	y
-5	-2
2	4
7	3.5

$$\frac{\partial q}{\partial a} = 0 \Rightarrow -2 \sum (y_i - a - bx_i) = 0$$

$$\frac{\partial q}{\partial b} = 0 \Rightarrow -2 \sum x_i (y_i - a - bx_i) = 0$$

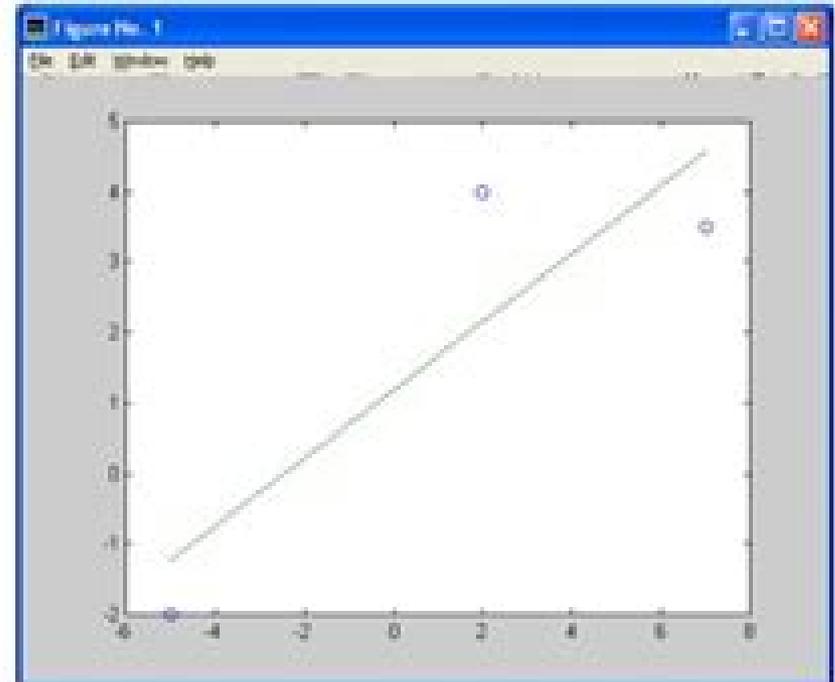

$$\begin{bmatrix} n & \sum x_i \\ \sum x_i & \sum x_i^2 \end{bmatrix} \begin{Bmatrix} a \\ b \end{Bmatrix} = \begin{Bmatrix} \sum y_i \\ \sum x_i y_i \end{Bmatrix}$$

$$y = a + bx$$

$$\begin{bmatrix} 3 & 4 \\ 4 & 78 \end{bmatrix} \begin{Bmatrix} a \\ b \end{Bmatrix} = \begin{Bmatrix} 5.5 \\ 42.5 \end{Bmatrix}$$

$$\begin{Bmatrix} a \\ b \end{Bmatrix} = \frac{1}{218} \begin{bmatrix} 78 & -4 \\ -4 & 3 \end{bmatrix} \begin{Bmatrix} 5.5 \\ 42.5 \end{Bmatrix} \quad \begin{array}{l} a = 1.188 \\ b = 0.484 \end{array}$$

$$y = 1.188 + 0.484x$$

Least Squares Methods For System Identification:

System Identification Tien C. Hsia, 1977 **Filtering and System Identification** Michel Verhaegen, Vincent Verdult, 2012-07-19 Filtering and system identification are powerful techniques for building models of complex systems This 2007 book discusses the design of reliable numerical methods to retrieve missing information in models derived using these techniques Emphasis is on the least squares approach as applied to the linear state space model and problems of increasing complexity are analyzed and solved within this framework starting with the Kalman filter and concluding with the estimation of a full model noise statistics and state estimator directly from the data Key background topics including linear matrix algebra and linear system theory are covered followed by different estimation and identification methods in the state space model With end of chapter exercises MATLAB simulations and numerous illustrations this book will appeal to graduate students and researchers in electrical mechanical and aerospace engineering It is also useful for practitioners Additional resources for this title including solutions for instructors are available online at www.cambridge.org/9780521875127

Least Squares Method of System Identification for Multivariable Linear Systems Keith Randall Holstine, 1987 **Exact and Approximate Modeling of Linear Systems** Ivan Markovsky, Jan C. Willems, Sabine Van Huffel, Bart De Moor, 2006-01-01 This title elegantly introduces the behavioral approach to mathematical modeling an approach that requires models to be viewed as sets of possible outcomes rather than to be a priori bound to particular representations The authors discuss exact and approximate fitting of data by linear bilinear and quadratic static models and linear dynamic models a formulation that enables readers to select the most suitable representation for a particular purpose This book presents exact subspace type and approximate optimization based identification methods as well as representation free problem formulations an overview of solution approaches and software implementation Readers will find an exposition of a wide variety of modeling problems starting from observed data The presented theory leads to algorithms that are implemented in C language and in MATLAB **Model-Reference Adaptive Control** Nhan T. Nguyen, 2018-03-01 This textbook provides readers with a good working knowledge of adaptive control theory through applications It is intended for students beginning masters or doctoral courses and control practitioners wishing to get up to speed in the subject expeditiously Readers are taught a wide variety of adaptive control techniques starting with simple methods and extending step by step to more complex ones Stability proofs are provided for all adaptive control techniques without obfuscating reader understanding with excessive mathematics The book begins with standard model reference adaptive control MRAC for first order second order and multi input multi output systems Treatment of least squares parameter estimation and its extension to MRAC follow helping readers to gain a different perspective on MRAC Function approximation with orthogonal polynomials and neural networks and MRAC using neural networks are also covered Robustness issues connected with MRAC are discussed helping the student to appreciate potential pitfalls of the technique This appreciation is encouraged by drawing parallels between

various aspects of robustness and linear time invariant systems wherever relevant Following on from the robustness problems is material covering robust adaptive control including standard methods and detailed exposition of recent advances in particular the author s work on optimal control modification Interesting properties of the new method are illustrated in the design of adaptive systems to meet stability margins This method has been successfully flight tested on research aircraft one of various flight control applications detailed towards the end of the book along with a hybrid adaptive flight control architecture that combines direct MRAC with least squares indirect adaptive control In addition to the applications understanding is encouraged by the use of end of chapter exercises and associated MATLAB files Readers will need no more than the standard mathematics for basic control theory such as differential equations and matrix algebra the book covers the foundations of MRAC and the necessary mathematical preliminaries
