Divakar,Vertika Shukla,Rajesh Bajpai,2015-02-09 This book discusses in detail molecular mycobiont culture biomonitoring and bioprospection of lichens providing insights into advances in different fields of lichenology by applying modern techniques and approaches and examining how their application has enhanced or changed classical approaches It offers a valuable resource especially for beginners students and researchers from different academic backgrounds interested in the study of lichens In recent

years the introduction of modern analytical techniques and approaches has significantly improved our understanding of the environment including lichens. Lichens are unique organisms which possess untapped potential as effective and reliable bioindicators, sources of therapeutic phytochemicals and as excellent extremophiles. The unique and peculiar characteristics of lichens underline the need for a multidimensional approach to explore their potential in various fields of environment science, botany and chemistry. Modern techniques, especially molecular techniques, have greatly enriched the field of lichen taxonomy and its position in the plant kingdom, revealing little known species and exploring their evolutionary history while multivariate analysis and GIS approaches have established lichens as an ideal and reliable tool for monitoring air pollution. Advanced culture techniques have expanded the pharmacological applications of lichens which was formerly restricted due to their small biomass. The advent of sophisticated analytical instrumentation has now facilitated the isolation and characterization of lichen bioactive constituents even in lower concentrations as well as the estimation of their stress responses at different levels of pollution. As lichen diversity is adversely affected by increasing air pollution, there is a pressing need to develop effective management practices to conserve, restore and document lichen diversity.

Lichenpedia Kay Hurley, 2024-05-28. Kay Hurley introduces key aspects of lichen biology, environmental roles, emerging uses, scientific history and myth. She describes the variety of forms that lichens take, from leafy to filamentous to things reminiscent of skin diseases with imaginative names like witch's hair. She explains the surprising ways that birds and beasts, from reindeer and moose down to tiny tardigrades, use lichens and how lichens survive in extreme environments from deserts to Antarctica to outer space. Hurley also introduces some of the innovators who have advanced the knowledge of lichens from the ancient Greek philosopher Theophrastus to today's professional lichenologists. *Handbook of Natural Colorants* Thomas Bechtold, Rita Mussak, 2009-04-06. Concentration on renewable resources, sustainability and replacement of oil-based products are driving forces to reassess the potential of natural resources including natural colorants. The growing consumer interest in purchasing green products which exhibit an improved environmental profile can be seen as the breakthrough force needed to reintroduce natural colorants into the modern markets. Written by scientists with specialised knowledge in the field, *Handbook of Natural Colorants* provides a unique source of information summarising the present knowledge of natural colorants in depth. Supporting researchers in this emerging field of sustainable chemistry, it provides easy access to the theory and practice of natural colorants from different viewpoints including agricultural, economic and legislative aspects. Topics covered include: History of coloration technology; Present position of natural colorants; Regional plant source availability; Specific application techniques; Chemical properties that professional dyers and chemists have to consider; Agricultural sourcing of dyes with an emphasis on renewable resources; Discussions on energy and material balance issues arising from the sourcing of materials; Production aspects of colorants leading on to the key applications; Environmental and economic aspects. Also included are the pros and cons of natural dyestuffs, presenting some promising results and evaluating
