Minds Machine Foundations Behavior Second:

Epistemology of the Human Sciences Walter B. Weimer, 2022-11-16 This book argues for evolutionary epistemology and distinguishing functionality from physicality in the social sciences It explores the implications for this approach to understanding in biology economics psychology and political science Presenting a comprehensive overview of philosophical topics in the social sciences the book emphasizes how all human cognition and behavior is characterized by functionality and complexity and thus cannot be explained by the point predictions and exact laws found in the physical sciences Realms of functional complexity such as the market order in economics the social rules of conduct and the human CNS require a focus on explanations of the principles involved rather than predicting exact outcomes This requires study of the historical context to understand behavior and cognition This approach notes that functional complexity is central to classical liberal ideas such as division of labour and knowledge and how this is a far more powerful and adequate account of social organization than central planning Through comparison of these approaches as well as its interdisciplinary scope this book will interest both academics and students in philosophy biology economics psychology and all other social sciences

Mind as Machine Margaret A. Boden, 2006 The development of cognitive science is one of the most remarkable and fascinating intellectual achievements of the modern era It brings together psychology neuroscience artificial intelligence computing philosophy linguistics and anthropology in the project of understanding the mind by modelling its workings Oxford University Press now presents a masterful history of cognitive science told by one of its most eminent practitioners

Rethinking Medical Humanities Rinaldo F. Canalis, Massimo Ciavolella, Valeria Finucci, 2022-12-19 Medical Humanities may be broadly conceptualized as a discipline wherein medicine and its specialties intersect with those of the humanities and social sciences As such it is a hybrid area of study where the impact of disease and healing science on culture is assessed and expressed in the particular language of the disciplines concerned with the human experience However as much as at first sight this definition appears to be clear it does not reflect how the interaction of medicine with the humanities has evolved to become a separate field of study In this publication we have explored through the analysis of a group of selected multidisciplinary essays the dynamics of this process The essays predominantly address the interaction of literature philosophy art art history ethics and education with medicine and its specialties from the classical period to the present Particular attention has been given to the Medieval Early Modern and Enlightenment periods To avoid a rigid compartmentalization of the book based on individual fields of study we opted for a fluid division into multidisciplinary sections reflective of the complex interactions of the included works with medicine

Microfoundations of Evolutionary Economics Yoshinori Shiozawa, Masashi Morioka, Kazuhisa Taniguchi, 2019-06-27 This book provides for the first time the microfoundations of evolutionary economics enabling the reader to grasp a new framework for economic analysis that is compatible with evolutionary processes Any independent approach to economics must include a value theory or price theory and price and quantity adjustment processes

Evolutionary economics has rightly and successfully concentrated its efforts on explaining evolutionary processes in technology and institutions. However, it does not have its own value theory and is not capable of explaining the workings of everyday economics processes in which any evolutionary process would take place. Our point of departure is the addition of myopic agents with severely limited rational and forecasting capacities in stark contrast to mainstream economics. We show how myopic agents in a complex world can produce a stable price system and demonstrate how they can adjust their production to changing demand flows. Agents behave without any knowledge of the overall process and they generate a stable economy as large as the global network of exchanges. This is the true miracle of the market mechanism. In contrast to mainstream general equilibrium theory, this miracle can be explained without the need for an auctioneer or infinitely rational agents. Thanks to this book, evolutionary economics can now claim to be an independent approach to economics that can completely replace mainstream neoclassical economics.
