**The Ultimate Guide to Professional Database Programming with Python and PostgreSQL** Vivian Siahaan,Rismon Hasiholan Sianipar,2019-01-15 Python has various database drivers for PostgreSQL Currently the psycopg is the most popular PostgreSQL database adapter for the Python language The psycopg fully implements the Python DB API 2.0 specification The current version of the psycopg is 2 or psycopg2 The psycopg2 database adapter implemented in C as a libpq wrapper resulting in both fast and secure The psycopg2 provides many useful features such as client side and server side cursors asynchronous notification and communication COPY command support etc PostgreSQL was designed to run on UNIX like platforms However PostgreSQL was then also designed to be portable so that it could run on various platforms such as Mac OS X Solaris and Windows PostgreSQL is free and open source software Its source code is available under PostgreSQL license a liberal open source license You are free to use modify and distribute PostgreSQL in any form PostgreSQL requires very minimum maintained efforts because of its stability Therefore if you develop applications based on PostgreSQL the total cost of ownership is low in comparison with other database management systems In Chapter 2 you will learn querying data from the postgresql using Python including establishing a database connection creating a statement object executing the query processing the resultset object querying data using a statement that returns multiple rows querying data using a statement that has parameters inserting data into a table using Python updating data in postgresql database using Python calling postgresql stored function using Python deleting data from a postgresql table using Python and postgresql Python transaction In Chapter 3 you will

learn managing table structure and views including postgresql data types postgresql create table postgresql select into statement postgresql create table as using postgresql serial to create auto increment column identity column alter table drop table truncate table check constraint not null constraint foreign key primary key unique constraint managing postgresql views creating updatable views materialized views creating updatable views using the with check option clause and recursive view In Chapter 4 you will learn statements operators and clauses including select order by select distinct limit fetch in between postgresql like is null alias joins inner join postgresql left join self join full outer join cross join natural join group by having intersect operator except operator grouping sets cube and rollup In Chapter 5 you will learn postgresql trigger aggregate and string functions including creating the first trigger in postgresql managing postgresql trigger aggregate functions avg function max function min function sum function postgresql concat function ascii function trim function length function substring function regexp\_matches function regexp\_replace function replace function to\_number function and to\_char function

has eight columns `feature_id` primary key `suspect_id` foreign key `feature1` `feature2` `feature3` `feature4` `feature5` and `feature6`. All six fields except keys will have a BLOB data type so that the image of the feature will be directly saved into this table. In the seventh chapter you will add two tables `Police_Station` and `Investigator`. These two tables will later be joined to `Suspect` table through another table `File_Case` which will be built in the seventh chapter. The `Police_Station` has six columns: `police_station_id` primary key, `location`, `city`, `province`, `telephone`, and `photo`. The `Investigator` has eight columns: `investigator_id` primary key, `investigator_name`, `rank`, `birth_date`, `gender`, `address`, `telephone`, and `photo`. Here you will design a Java GUI to display, edit, fill, and delete data in both tables. In the eighth chapter you will add two tables `Victim` and `File_Case`. The `File_Case` table will connect four other tables: `Suspect`, `Police_Station`, `Investigator`, and `Victim`. The `Victim` table has nine columns: `victim_id` primary key, `victim_name`, `crime_type`, `birth_date`, `crime_date`, `gender`, `address`, `telephone`, and `photo`. The `File_Case` has seven columns: `file_case_id` primary key, `suspect_id` foreign key, `police_station_id` foreign key, `investigator_id` foreign key, `victim_id` foreign key, `status`, and `description`. Here you will also design a Java GUI to display, edit, fill, and delete data in both tables. Finally, this book is hopefully useful for you.
