Trauth,2020-12-02 MATLAB is used in a wide range of geoscientific applications e g for image processing in remote sensing for creating and processing digital elevation models and for analyzing time series This book introduces readers to MATLAB based data analysis methods used in the geosciences including basic statistics for univariate bivariate and multivariate datasets time series analysis signal processing the analysis of spatial and directional data and image analysis The revised and updated Fifth Edition includes seven new sections and the majority of the chapters have been rewritten and significantly expanded New sections include error analysis the problem of classical linear regression of log transformed data aligning stratigraphic sequences the Normalized Difference Vegetation Index Aitchison s log ratio transformation graphical representation of spherical data and statistics of spherical data The book also includes numerous examples demonstrating how MATLAB can be used on datasets from the earth sciences The supplementary electronic material available online through SpringerLink contains recipes that include all the MATLAB commands featured in the book and the sample data **Computational Intelligence** Amit Konar,2006-01-16 Computational Intelligence Principles Techniques and Applications presents both theories and applications

of computational intelligence in a clear precise and highly comprehensive style The textbook addresses the fundamental aspects of fuzzy sets and logic neural networks evolutionary computing and belief networks The application areas include fuzzy databases fuzzy control image understanding expert systems object recognition criminal investigation telecommunication networks and intelligent robots The book contains many numerical examples and homework problems with sufficient hints so that the students can solve them on their own   **Adaptive Filtering** Paulo S. R. Diniz,2019-11-28 In the fifth edition of this textbook author Paulo S R Diniz presents updated text on the basic concepts of adaptive signal processing and adaptive filtering He first introduces the main classes of adaptive filtering algorithms in a unified framework using clear notations that facilitate actual implementation Algorithms are described in tables which are detailed enough to allow the reader to verify the covered concepts Examples address up to date problems drawn from actual applications Several chapters are expanded and a new chapter Kalman Filtering is included The book provides a concise background on adaptive filtering including the family of LMS affine projection RLS set membership algorithms and Kalman filters as well as nonlinear sub band blind IIR adaptive filtering and more Problems are included at the end of chapters A MATLAB package is provided so the reader can solve new problems and test algorithms The book also offers easy access to working algorithms for practicing engineers   **Python Recipes for Earth Sciences** Martin H. Trauth,2024-10-07 Python is used in a wide range of geoscientific applications such as in processing images for remote sensing in generating and processing digital elevation models and in analyzing time series This book introduces methods of data analysis in the geosciences using Python that include basic statistics for univariate bivariate and multivariate data sets time series analysis and signal processing the analysis of spatial and directional data and image analysis The text includes numerous examples that demonstrate how Python can be used on data sets from the earth sciences Codes are available online through GitHub   **Subband Adaptive Filtering** Kong-Aik Lee,Woon-Seng Gan,Sen M. Kuo,2009-07-06 Subband adaptive filtering is rapidly becoming one of the most effective techniques for reducing computational complexity and improving the convergence rate of algorithms in adaptive signal processing applications This book provides an introductory yet extensive guide on the theory of various subband adaptive filtering techniques For beginners the authors discuss the basic principles that underlie the design and implementation of subband adaptive filters For advanced readers a comprehensive coverage of recent developments such as multiband tap weight adaptation delayless architectures and filter bank design methods for reducing band edge effects are included Several analysis techniques and complexity evaluation are also introduced in this book to provide better understanding of subband adaptive filtering This book bridges the gaps between the mixed domain natures of subband adaptive filtering techniques and provides enough depth to the material augmented by many MATLAB functions and examples Key Features Acts as a timely introduction for researchers graduate students and engineers who want to design and deploy subband adaptive filters in their research and applications Bridges the gaps between two distinct domains

adaptive filter theory and multirate signal processing Uses a practical approach through MATLAB based source programs on the accompanying CD Includes more than 100 M files allowing readers to modify the code for different algorithms and applications and to gain more insight into the theory and concepts of subband adaptive filters Subband Adaptive Filtering is aimed primarily at practicing engineers as well as senior undergraduate and graduate students It will also be of interest to researchers technical managers and computer scientists **Neural Networks and Learning Machines** Simon S.
